Rundbürsten mit Holzkern

Chungking-Borsten

Lathe brushes with wooden core

Chungking bristles

Unsere Rundbürsten sind mit Borsten allererster Qualität ausgestattet, je nach Anforderung mit Holz- oder Kunststoffkern. Wählen Sie zwischen spitzer und gerader Borstenstellung sowie unterschiedlicher Reihenanzahl für genau abgestimmtes, präzises Arbeiten.

Kurzer, harter Borstenbesatz eignet sich zur Bearbeitung/Vorpolitur von harten Metallen und NEM, längere, weiche Borsten für die Vorpolitur z.B. von Gold, Silber und Platin. Für sicheren Halt auf der Spindel sind Holzkernbürsten mit Zwingen versehen. Nessel-, Stoff- und Vlieseinlagen sorgen für eine optimale Aufnahme von Polierpaste.

Our round polishing brushes fitted with bristle of the very highest quality, and, depending on requirements, with a wooden or plastic core. You can choose between pointed or straight bristle setting as well as different numbers of rows for exactly tailored, precise polishing.

Short, hard bristles are suitable for processing/pre-polishing of hard metals and non-ferrous metals, longer, softer bristles for the pre-polishing of gold, silver and platinum, for example. For safe mounting on the spindle wooden core brushes are furnished with clamps. Muslin, fabric insert and Scotch Brite ensure an optimum base for the polishing paste.

Schmalpolierbürsten mit Metallkern & Kunststoffzentrum

Chungking-Borsten / Pferdehaar

Schmalpolierbürsten eignen sich zur Vor- und Nachpolitur von Kunststoffen und Metallen. Die schmalen, einreihigen Bürsten sind optimal für die Bearbeitung schlecht zugänglicher Stellen in der Kunststofftechnik.

Vielfältige Besatzmaterialien stehen zur Verfügung. Wählen Sie zwischen Ausführungen mit Metallkern und Metallzentrum oder mit Metallkern und Kunststoffzentrum.

Für Glanzpolituren kommt Ziegenhaarbesatz mit geeigneter Polierpaste zum Einsatz.

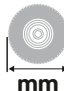

Slimline brushes with metal & plastic hub

Chungking bristles / horse hair

Slimline brushes are suitable for pre- and post-polishing of plastics and metals. The slim, single-row brushes are ideal for processing areas in plastic technology that are difficult to reach.

A multitude of brush materials are available. Select between variants with metal cores and metal hub or with metal core and plastic hub.

Goat hair brushes with suitable polishing paste are used for high sheen polishing.

Polierschwabbeln mit Kunststoffkern

Baumwolle, weiß / Flanell

Polishing discs with plastic core

white cotton / flannel

Polierschwabbeln sind – je nach Materialbesatz – für unterschiedliche Hochglanzpolituren einsetzbar: Baumwolle eignet sich für das Polieren von Kunstharz, Gold, Titan und Stahl. Wählen Sie zwischen verschiedenen Gewebearten, Durchmessern und Dicken.

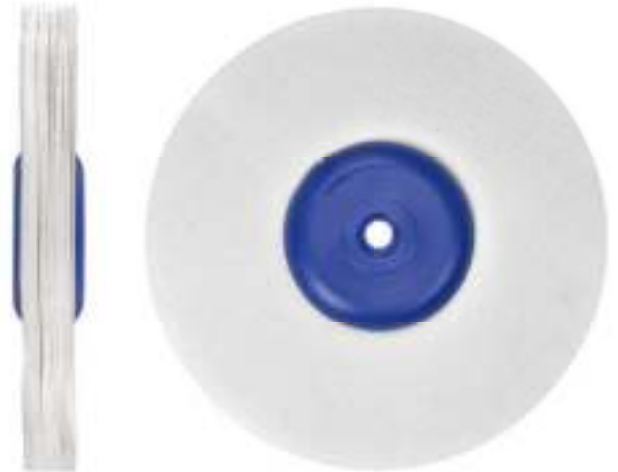

Leder ist ideal zur trockenen Fertigpolitur, während Falten-schwabbeln für Edel- und Nichtelegmetalle zum Einsatz kommen. Durch die Falten ist eine gute Kühlwirkung und Standzeit sowie geringes Ausfransen und bessere Pastenhaftung gewährleistet (auch mit Bimsstein).

Polishing discs are – depending on material – used for different high gloss polishing finishes: Cotton is suitable for polishing plastic resin, gold, titanium and steel. You can choose between texture, diameters and thicknesses.

Leather is ideal for a dry finishing polish, whereas cloth discs with pleats are employed for precious and non-precious metals. The pleats provide good cooling and service life as well as reduce fraying and ensure better paste adherence (also with pumice).

Baumwoll-Rundbürsten mit Holzkern

Cotton brushes with wooden core

Baumwoll-Rundbürsten mit Holzkern und extraweicher Baumwolle eignen sich für die Glanzpolitur aller Werkstoffe.

Eine breite Auswahl an Durchmessern und Besatzbreiten erlaubt eine große Vielfalt von Anwendungen.

Cotton brushes comprise a wooden core and ultrasoft cotton and are suitable for the high gloss polish of all materials.

A broad range of diameters and head widths ensure a wide diversity of applications.

Ringriegel konisch

Baumwolle / Filz

Ring brushes conical

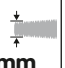

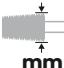

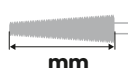

cotton / felt

Ringriegel aus extraweicher Baumwolle werden bevorzugt im Schmuckbereich für die Hochglanz-Ringpolitur eingesetzt.

Verschiedene Durchmesser und Längen sind erhältlich – auch mit Besatz Borste, Filz, Stahl und Neusilber

Ring brushes made of ultrasoft cotton are especially used with jewellery for high gloss ring polishing.

Different diameters and lengths are available – also with heads of bristle, felt, steel and nickel silver.

Miniatur-Bürsten Miniature brushes

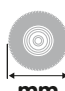

Chungking-Borsten Chungking bristles

BELLOTTI stellt in einer großen Vielfalt von Besatzmaterialien, Formen und Durchmessern Miniatur-Bürsten her – für die unterschiedlichsten Anwendungen mit dem Handstück:

- Chungking zur Vorpolitur/Politur von Metallen und Kunststoffen
- weicher Besatz (z.B. Ziegenhaar) für Glanz/Hochglanz (mit Polierpaste für Metalle und Kunststoffe gleichermaßen geeignet)
- Längerer Besatz ist ideal für die Edelmetallpolitur
- Messing-/Stahlbesatz zum Glätten/Verdichten/Polieren von Edelmetallen und Chrom-Kobalt
- Miniaturschwabbeln für die Hochglanzpolitur
- Miniaturkelche und -pinsel für schwer zugängliche Dentalflächen, zum Ausarbeiten/Polieren von zahntechnischen Werkstücken
- Scotch Brite-Bürsten als Alternative zum Schmirgelpapier (Hohe Standzeiten, 6 Körnungen für Reinigung und Finishing, auch zur Modellherstellung von weichen Kunststoffen)
- BellfixDisc-Polyamidbürsten mit durchsetzten Schleif- und Poliermitteln in verschiedenen Körnungen für effektiven Feinschliff, Vorpolitur und Hochglanz ohne den zusätzlichen Einsatz von Schleifmitteln, Chemikalien oder Pasten
- Bellfix/Bellfila-Bürsten mit Polyamidfaser-Beschichtung: Eingebettetes Siliciumcarbid bzw. Aluminiumoxid erspart jegliche Polierpasten und -mittel. Verschiedene Körnungen und Formen (Kelch, Pinsel, Rad) für Verblendkunststoffe und Dentalkeramiken.

BELLOTTI produces these in a wide range of head materials, shapes and diameters – for the broadest range of applications with the hand piece:

- Bristles for pre-polishing/polishing of metals and plastics
- Soft head (e.g. goat hair) for polish/high gloss polish (with polishing paste for metals and plastics equally suitable for metals and plastics)
- Longer head is ideal for polishing precious metals
Brass/steel head for smoothing/compacting/polishing of precious metals and chrome cobalt
- Miniature cloths for high gloss polishing
- Miniature cups and brushes for difficult-to-reach dental areas, for finishing/polishing of dental components
- Scotch Brite brushes as an alternative to abrasive paper (high service life, 6 grades for cleaning and finishing, also for model making from soft plastics)
- Bellfix disc polyamide brushes with integrated grinding and polishing mediums in varying grains for effective finishing, pre-polishing and high gloss without the additional use of grinding mediums, chemicals or pastes.
- Bellfix/Bellfila brushes with abrasive filament coating: embedded silicone carbide or aluminium oxide make all polishing pastes and media superfluous. Different grades and shapes (cup, brush, wheel) for plastic trim and dental ceramics.

Polierer Polisher

Silikon

silicone

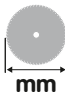

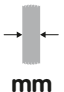

Silikonpolierer sind ideal zum Abtragen, Glätten und Polieren von Acryl und Prothesenkunststoffen. Ebenfalls geeignet sind sie für die schonende Nagelpflege.

In der Bellflex-Ausführung eignen sie sich für einen kühlen Schliff und eine effektive Politur von Silber, Platin und Titan sowie für dentale Korrekturen ohne Glanzbrand. In der Belldia-Ausführung sind sie ideale Diamantpolierer für Hochglanz auf Keramik und Metall.

Silicone polisher are ideal for removing, smoothing and polishing acrylic and overdenture plastics. Likewise suitable for gentle nail care.

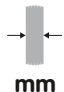

In the Bellflex version suitable for a cool finish and effective polish of silver, platinum and titanium as well as for dental corrections without glaze firing.

In the Belldia variant they are ideal diamond polishers for providing a high gloss on ceramics and metal.

Drahtbürsten mit Holzkern

Messingdraht, gewellt

Wire brushes with wooden core

crimped brass wire

Drahtbürsten sind durch ihre Vielseitigkeit und Wirtschaftlichkeit ideal für viele Fertigungsbereiche und Produkte der Industrie und der Schmuckherstellung geeignet:

Zum Reinigen, Polieren, Mattieren, Entgraten. Verschiedene Durchmesser, Drahtstärken, Besatzbreiten und -materialien stehen zur Verfügung.

Their versatility and economy make these brushes ideal for many manufacturing areas and products in industry and in the manufacture of jewellery:

For cleaning, polishing, satinizing, deburring. Different diameters, wire thicknesses, brush widths and materials are available.

Bohrer- Reinigungsbürsten

Messingdraht, gewellt / Nylonfaser

Burs cleaning brushes

crimped brass wire / nylon filament

Zum groben Vorreinigen von Bohrern, Fräsern und Instrumenten aller Art. Der gewellte Messingdraht greift die Instrumente-Oberflächen nicht an. Auch Nylonbesatz ist möglich: für eine besonders materialschonende und trotzdem effiziente Reinigung.

Intended for the rough pre-cleaning of drill holes, mill cutters and instruments of all kinds. The crimped brass wire does not attack the instrument surfaces. Even nylon heads are possible: for a particularly careful yet efficient cleaning.

Handbürsten Hand brushes

Kalkutta / Chungking-Borsten / Pferdehaar /
Ziegenhaar / Nylonfaser

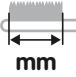

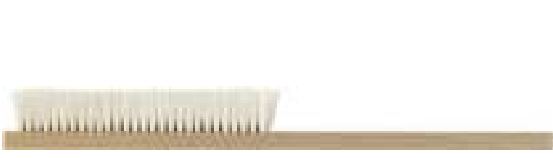

Kalkutta / Chungking bristles / horse hair /
goat hair / nylon filament

Handbürsten mit Holzkörper werden in verschiedenen Arbeitsbreiten (Reihenzahlen) hergestellt.

Als Besatzmaterialien dienen Chungking-Borsten, Messing, Stahl oder Nylon. Zum Bearbeiten und Reinigen von kleinen Teilen in der Schmuck- und Uhrenherstellung und zur feinmechanischen Bearbeitung in Industrie und Handwerk.

Hand brushes with wooden cores manufactured in different working widths (row numbers).

Head material can be Chungking bristles, brass, steel or nylon. For the processing and cleaning of small parts and chronograph manufacturing, and for fine mechanical work in the industrial sector and crafts.
