The "New Generation Handles"

Z-SHAPE RELAX

The Z-SHAPE Relax handles were designed according to ergonomic knowledge for the optimal working process during the curettage.
The handles are coated with the new ZEPF nanopal® coating.
The black-coated ZEPF nanopal® curettes have a durable, very hard surface which is very aggressive and sharp-edged, due to their crystalline nanostructure.
With the unique coating, the surface hardness is increased to an unprecedented **4500 Vickers**.
The black, scratch-resistant surface is easy to clean and prevents unpleasant light reflections.
As usual, the instrument tips are interchangeable due to the M4 x 0.5 mm thread. *QUICK*FIX

Mouth Mirrors

Due to the standardized thread dimensions, all mirrors available from **HELMUT ZEPF** are compatible with any handle supplied by **HELMUT ZEPF** and can of course be desinfected and sterilized by all usual methods. For fitting handles, please refer to pages **02-03**, **02-05** and for the fitting **ZEPF BIONIK** Handle, please refer to page **03-03**.

Lipcare Mouth Mirror acc. to Dr. Preusse

The Lipcare Mouth Mirror / Retractor Combination is distinguished by the following features:

- optimal ergonomic working for the user
- patient-friendly, atraumatic, extensive retraction of the cheek
- Titanium Mirror, Ø 24 mm, for best visibility
- possibility of preparation with all usual cleaning methods
- sterilizable up to 273° F / 134° C

ZEPF Retractor and Mouth Mirror
acc. to Dentist Beck

The ZEPF BIONIK Retractor and Mouth Mirror is available in two sizes, featuring a heart-shaped, ergonomic and highly polished design.
The instrument is available in size 24 and 27 mm.

It is universally applicable as:

- Mouth mirror, cheek or tongue retractor, mucoperiosteal flap retractor.
- Its innovative heart shape allows ergonomic adaption in all quadrants.
- Due to its reflective surface, the retractor allows an optimal illumination of the surgical site.
- The large contact surfaces make the retractor very patient-friendly.

ZEPF Photography and Cheek Retractor, in the Onyx Version or stainless steel

HELMUT ZEPF Cheek Retractors are frequently used in intraoral photography, in extensive cheek retraction, in dental diagnostics and in surgery.
Conventional retractors are also available in plastic material. However, depending on the used plastic, these are not always entirely harmless when being prepared in the hygiene chain. Our retractors are made of stainless medical steel and fulfill all the requirements of the RKI guidelines.

The ergonomic design of the retractors guarantees an optimal handling and is well accepted by patients.

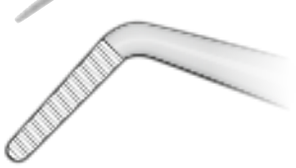
ZEPF Dental Tweezers

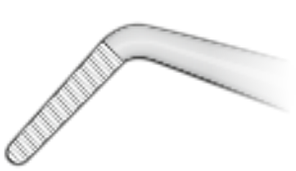
All **HELMUT ZEPF** Dental Tweezers have guide pins that prevent their tips from crossing.

The broader version with its shorter tips allow an application with more pressure compared to common tweezers.

22.014.03 London College Tweezers, diamond-tipped, 15 cm



22.011.03 London-College Tweezers, serrated long tips, 15 cm



22.051.03 Meriam Tweezers, serrated tips, 16 cm

ZEPF Ergonomic Dental Tweezers

Our extra comfortable **HELMUT ZEPF** Ergonomic Dental Tweezers are pleasant to hold and have been specially designed for use in extended, otherwise tiring, applications.

The broader version with its shorter tips allow an application with more pressure compared to common tweezers.

22.025.03 grooved tips, 15 cm

22.025.03D diamond-tipped, 15 cm

22.024.04 London College Cotton & Dressing Pliers, modif., 15 cm, approx. 20°

ZEPF Medical Probes

Those **HELMUT ZEPF** Probes shown in figures **8**, **9**, **17** and **23** are available in octagonal and cylindrical versions, both of which are pleasantly lightweight. Our ergonomically designed octagonal handles are comfortable to hold, and provide precision fingertip control.
Their thin, unbreakable, yet flexible tips manufactured from special alloy steel have an extremely long service life.

reddot design award
winner 2010

bionik ZEPF

ZEPF Periodontal Probes

The perio-diagnostics should be done regularly to have a permanent record to make sure that gingival and especially periodontal inflammations are diagnosed at an early stage.
The benefit for the patient is that either the periodontal health can be confirmed or infection is detected early. Like that suitable dental treatments can be initiated to cure the infection or to stop the progression.
With the new Contrast PA Probe Inserts an even easier visualisation is guaranteed during the examination.
The graduation (3 mm) of the probe is visible at the deepest point of the sulcus of all measuring points. Calculus or defective restoration margins cannot be detected, the gingiva is healthy, no bleeding after (careful) probing = no treatment necessary, further preventive care.
Deeper measurements (> 3 mm) indicate a gingivitis. According to the depth further evaluation and documentation must take place according to the rules of the PSI.

See page **03-08** for article numbers of the different **ZEPF** Contrast Probes.

HELMUT ZEPF M5 Curettes have a 1st shaft which is about 3 mm longer. The sharpened instrument tip is shortened as to allow a special subgingival curettage for tight and deep pockets as well as narrow root surfaces.

Contrast PA Probe Inserts

The new **ZEPF** Contrast PA Probes are made of plastic material and have a flexible working tip which adapts optimally to the anatomy of the pocket depth when measuring.
Color-stable, black markings on the white basic material guarantee a very good contrast for reading.
The sterilizable, exchangeable tips are available in different common graduations.
They are suited to determine the parodontal status and especially to be used on implants. Scratching of implant surfaces is avoided with these probes.

The tips are reusable until they bend, the color fades or the graduation is not readable any more.

Periodontal Probes

All **HELMUT ZEPF** Periodontal Probes are high-speed machined. Their tips are thus very fine and dimensionally accurate to within very high tolerances. All our PA-Probes have markings that are suitable for ultrasonic cleaning.
Our WHO Periodontal Probes have spherical tips.

They are particularly ideal for:

- determining papillary
- bleeding indices, and their “stops” (the balls on their tips) prevent injuries when measuring the depths of pockets, i.e., they are more atraumatic than other types of PA Probes.

Periodontal Screening Index, PSI

For using the periodontal screening index, it is necessary to use the WHO probe. The steel ball at the distal end of the probe features a diameter of 0.5 mm.
The steel ball avoids not only injuries but allows to discover rough surfaces and edges of dental fillings. The first measurement area of the probe is a black 2 mm band, which shows the depth from 3.5 mm up to 5.5 mm.
For further information, please check the relevant description of the periodontal screening index (PSI).

ZEPF BIONIK Gracey Special Curettes

HELMUT ZEPF Gracey Curettes are special Curettes that have just a single working surface or cutting edge, and are thus suitable for removing concrementations or dental plaque only.

The **ZEPF** BIONIK Handles are available in 10 different colors.

See page **03-02** and **03-03** for article numbers of the different color and handle versions.

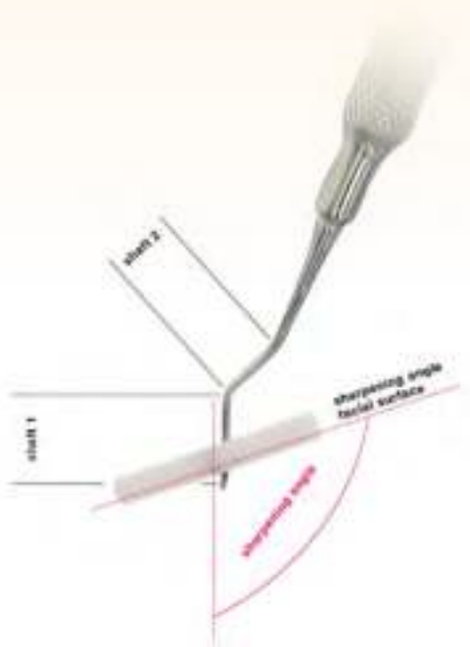
This periodontic Chisel is ideally suited to remove bone materials,
as well as contouring bones

24.926.10

Magnetic Sticks

Once the first shaft is fixed in a right angle (use a vise with “Rounded Swing Head” for this purpose) the magnet stick is placed onto the facial surface. This will be carried out automatically. In so doing, you achieve the sharpening angle simply and accurately. As such you can now sharpen the curettes with precision.

Best results can be obtained with Natural Stone (Original Arkansas) and wetting slightly with Sharpening Oil 24.950.00.



24.926.75

Anatomical Plate Forceps

for all Endo purposes

Anatomical Plate Forceps acc. to Dr. Dirk **Brozio**

The full area contact generated by compressing the tweezers, ensures a safe support in each gripping angle. The Plate Forceps are featuring a much higher safety when gripping, holding and positioning fine and delicate objects. This problem has been solved by the patented design of the Plate Forceps as their working tips have circular surfaces with additional serrations inside. Easy and relaxed handling due to low holding forces to allow a safe and fast treatment.

22.107.21 **Anatomic Plate Forceps** 180 mm

22.031.08 **London-College** 150 mm

19.561.13

Nerve-Canal Pliers

Nerve-Canal Pliers for grasping fractured root-canal instruments or silver pins.
The very fine, concave cutout on the working tip allows to remove even deep-lying fractured files.

19.649.60

Surgical Aspirator

with Luer Connector, curved, optimal for Endo-Tips, 175 mm long, Ø 4.2 mm

24.074.13 Ø 3.0 mm

24.074.15 Ø 5.0 mm

Micro Mirrors

Micro Mirror with rhodium front surface coating, for a distortion-free mirror image, without double reflection.
The Micro Mirrors are excellent aids in microsurgery and endodontics.
Suitable for usage with enlarging glasses or OP-Microscopes.

All mirrors fit into commercially available mouth mirror handles with a diameter of M 2.5 mm **(see page 02-02)**.

24.074.16 7.0 x 2.0 mm

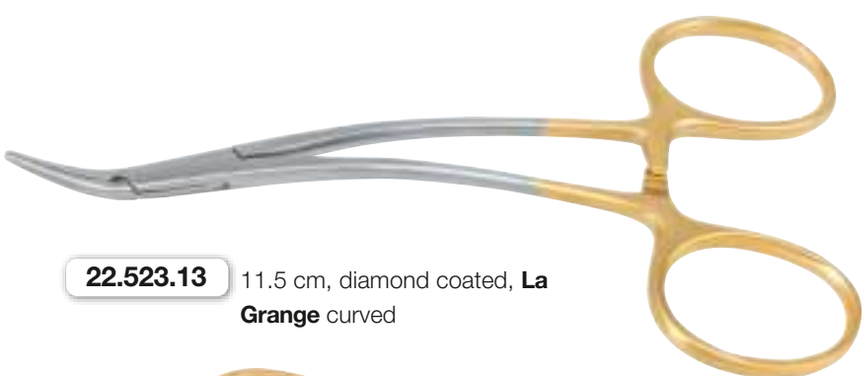
Plugger for the vertical condensation technique in endodontics

19.509.10 **Endo Plugger 3/5,** yellow color marking = 3°, red color marking = 5°, length of the tips 28 mm, Ø 0.3 mm and Ø 0.4 mm

19.509.20 **Endo Plugger 7/10,** blue color marking = 7°, grey color marking = 10°, length of the tips 28 mm, Ø 0.5 mm and Ø 0.9 mm

Peet Splinter Forceps

The Peet Splinter Forceps is a clamp with perfect grip due to diamond coating. The universal S-curve, as known from La Grange Scissors, makes it particularly flexible in usage. The Peet Splinter Forceps 22.523.90D has a stronger curve (90 °), which increases accessibility into the molar areas.



22.523.13 11.5 cm, diamond coated, **La Grange** curved

ZEPF BIONIK Composite Sets

All Composite Tips feature the special **ZEPF** Onyx coating.
The reflection-free **ZEPF** Onyx coating is extra smooth, harder and more scratch-resistant than conventionally coated composite instruments. The popular handles in the **ZEPF** BIONIK design are made of lightweight, high-quality plastic material.

The **ZEPF** BIONIK Handles are available in 10 different colors. See page **03-02** and **03-03** for article numbers of the different color and handle versions.

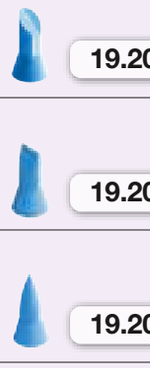
CompoSMOOTH

THE SURFACE IS THE KEY...

Re-creating the original tooth as faithfully as possible is a challenging task for the material, the dental technician and the dentist. In case of direct composite restorations, the complete esthetic responsibility lies in the hands of the practitioner. Optimal instruments are the key to success.



19.201.11

19.200.00

Brush Holder **ZEPF**-Line with push-out function

The new **CompoSMOOTH**, a special silicone brush, allows an effortless adaptation and modelling of the composite surface before polymerization. Even “sticky” composites can be adapted in an optimal way. The perfect surface morphology is created almost automatically by light pressure. The tooth shape is modeled in a way that reduces the subsequent polishing work to a minimum... and the result – optimal!

Brush Holder curved 30° **ZEPF**-Line with push-out function

ATTIN Compo Knives

to remove composite residues in filling treatment

With the ATTIN Compo Knives in the **ZEPF** bionik Handle, instruments have been specially developed for removing composite filling residues. Coated with nanopal® these instruments have a surface hardness of 4500 Vickers. Every dentist removes composite filling residues in different ways. Some use curettes, others excavators and sometimes scalpel blades are used. Curettes and scalers are usually too weak, i.e. there is a high risk of breakage. Scalpel blades have a high level of hardness, are correspondingly sharp and are good to use. But there are only a few angles available, so they do not allow ergonomic working.

The new ATTIN Compo Knives have addressed this requirement, i.e. strong blades manufactured at the correct angles, so all quadrants can be optimally reached.

With the new **ZEPF** nanopal® coating, the surface has a hitherto unknown hardness.
The cutting performance is therefore guaranteed for a long period. Should an insert ever become blunt, it is easy to replace only this instrument insert.

Advantages:

- Only two instruments for all quadrants
- **ZEPF** nanopal® coating for maximum cutting performance and lifetime
- Instrument inserts are exchangeable
- Glare-free surface

Micro Composite Spatulas –
superfine spatulas with ZEPF nanopal® coating

In the case of direct composite restorations, the entire aesthetic responsibility lies in the hands of the practitioner.
With the new micro-composite spatulas in 1.1 mm and 1.6 mm, the practitioner is provided with highly flexible ultra-fine spatulas for precise modeling of delicate structures.

The new ZEPF nanopal® coating offers you a very good contrast to the used material. The polished surface is easy to clean and extremely scratch-resistant.

Functionality of the Impression Trays for Implantology acc. to Helfgen

1. In the area of the prepared teeth, retraction cords are placed. Smooth, retention free screws are twisted into the implants.

2. On its lateral sides the covered tray is coated with adhesive. Then the tray is charged with putty material.

3. For the primary impression, the charged tray will be pressed until the cover rests on the smooth implant screws.

4. After the removal of the primary impression, the smooth screws will be exchanged for the complete impression posts.

Lower Jaw

Perforator

5. The tray cover is removed and the impressed screw channel is extended with the perforator.

6. For undisturbed repositioning, the perforated channel may be extended further using a super-coarse mill.

7. After the impression areas have been surrounded by ligth-body material, the repositioned impression may be filled additionally via the perforations of the cap channels, if required.

8. Once the material has cured, the positioning screws are loosened, and the finished impression can be removed.

Brush Holder

Its features at a glance

- Includes a dual brush receptacle and an original **ZEPF** scaled handle.
- Universal use on both upper and lower jaws and on all dental surfaces and cavities.
- No need for plastic applicators (reduces waste).
- May be desinfected and sterilized by using any standard procedure.
- Virtually unlimited service life.
- Designed for optimal ergonomy and general-purpose use.
- Suitable for all regular brush inserts (single use).
- Used in all areas of dentistry, especially adhesive restoration work.

bionik Retraction-Thread Plugger

Retraction threads are placed to repress or retract the gingiva from the tooth neck.
Prior to taking an impression for the preparation of crowns, the thread is adapted around the prepared tooth and the gingiva.

The **ZEPF** bionik Instruments feature specially adapted shapes, helping the dentist to place the threads in a time-saving way; this is useful as threads are tending to get thinner.

bionik reddot design award winner 2010

bionik **Universal Handle** made of PEEK high-tech plastic material – guarantees an ideal power transmission with formerly unknown sensitivity. The handle is available in 10 different, fresh basic colors.
The exchangeable working tips inserted in the ergonomic bionik handle offer highest economy and best tactile handling.

3.8 mm wide, in BIONIK Handle, yellow-green

26.123.02

EASY CONTACT POINT Hand Instrument
for premolars, for perfect forming of contact points in MO or DO restorations

EASY CONTACT POINT MOD Pliers
for perfect forming of contact points while preparing a composite restoration

26.122.00 MOD Pliers for premolars

26.122.10 MOD Pliers for molars

Composites are not easy to process. The modeling of clinically ideal contact points in particular is a big challenge for the practitioner. The Easy Contact Point Instruments will help to simplify this work step.
These instruments are available in two sizes as pliers for MOD filling, i.e. as premolar and as molar pliers.
To be used as hand instruments for MO or DO fillings. Also available in two sizes for premolars and molars.
The treatment period for a composite filling can therefore be considerably reduced.
The related economic benefit is evident.

Universal Finishing Clamp "Work smart not hard"

The **ZEPF** Finishing Clamp is an innovative holding instrument for finishing strips of all kinds. The instrument has been designed with ergonomics and functionality uppermost and contributes significantly to easing work involving finishing strips.
The treatment is pleasant for the patient because the tongue area is not restricted by the dentist's fingers and does not aggravate choking. Its main application is in the area of approximate composite fillings; apart from this the instrument is well suited for separation, the correction of filling surpluses in approximal area as well as the application of dental floss.

23.120.12

ZEPF Finishing Clamp, QTY 2 pieces
DBGM acc. to Dr. Peter Müller, Ebersbach

Fields of Application:

1) Completion of approximal composite fillings.

2) Separating by means of steel-carbon strips or diamond skived steel strips.

3) Correction of filling over-hangs in the approximal area.

4) Removal of matrix strips after laying fillings.

5) Clamping dental floss for interdental plaque removal, especially in difficult access spots in the lateral tooth area.

6) Clamping dental floss for removal of cement residues from the interdental area after cementing crowns / bridges.

Universal Forceps & Universal Tweezers

No treatment unit should lack these Universal **HELMUT ZEPF** Pliers and Tweezers.
They are used for securely grasping provisional plastic items, bridges, nerve instruments, impacted matrices, attaching inlays, setting interdental wedges, etc.
Usable on both upper and lower teeth. Their TC-jaws provide a secure grip.

Extraction System

Benex® II
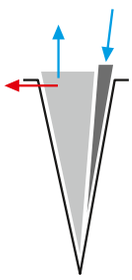
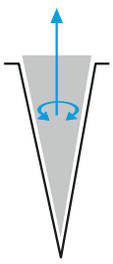
Pat.No. CH 696 458
acc. to Dr. med., med. dent. Benno Syfrig



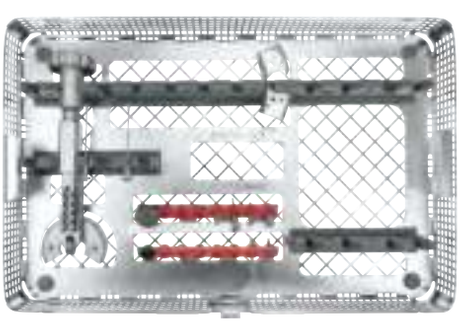
Polygon of forces, conventional:
Pressure on the alveolar wall by forceps or root elevator



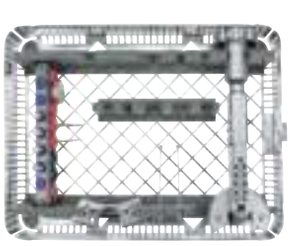
Polygon of forces with Benex® II:
Purely axial traction

In modern dental treatment, implantology following extraction is increasingly favoured. Consistent with the principle of minimal invasion, conserving soft and hard tissue structures is a must. Starting with extraction. The modified Benex® II guarantees a gentle and simple extraction of roots in the whole mouth. It is nearly impossible to harm the soft tissue and the surrounding bone. Due to the longitudinal extraction, Benex® II is an optimal basis for direct implantation. It is also a valuable help for retarded implantation after the extraction with the Benex® II system. Studies made after the use of Benex® II prove that the reossification of the extraction alveole is advancing optimally. This is a great advantage for the retarded implantation.

The new Benex® II is now available in a washbasket complying with the RKI guidelines. That way, the requirements of optimal cleanability and sterilization were taken into account. You will find further information, application examples and the Benex® user forum at: **www.benex-dent.com**



12.302.00 Benex® II Extraction System



12.303.00 Benex® II Basic Kit

Alveolar Ridge Preservation with Benex® II

What does it mean?

Alveolar Ridge Preservation means the treatment of the dental alveolus after extraction. 3 months after the Benex® extraction you find a considerably better ridge relation than with conventional gentle extractions.
The Benex® finds its successful application in both, private practices and universities. The Benex® has achieved an excellent status worldwide as basis for a subsequently successful implantation.
The new support for the dismounted Benex® System in a washbasket guarantees an optimal cleanability of Benex® in a washing machine or in an ultrasonic bath. All components can be fixed safely in the support.

Upon cleaning, the system can be sterilized in assembled condition.

In addition to the Benex® components, an optional periotome, an Xtool and an optional Benex® Pole Extractor can be placed in the support.

Benex®
Pat.No. CH 696 458

Application of the Extraction System

1. Anaesthesia. Cutting periodontal fibres (Sharpey fibres) in the sulcus by using the Periotome or the **HELMUT ZEPF** Xtool.

2. Strong, large roots must be loosened / luxated by axial movements within 30 sec., using a slim elevator / twister (Xtool from **HELMUT ZEPF**). Without using transversal movements. In case of multi-rooted teeth, the roots are divided and extracted separately.

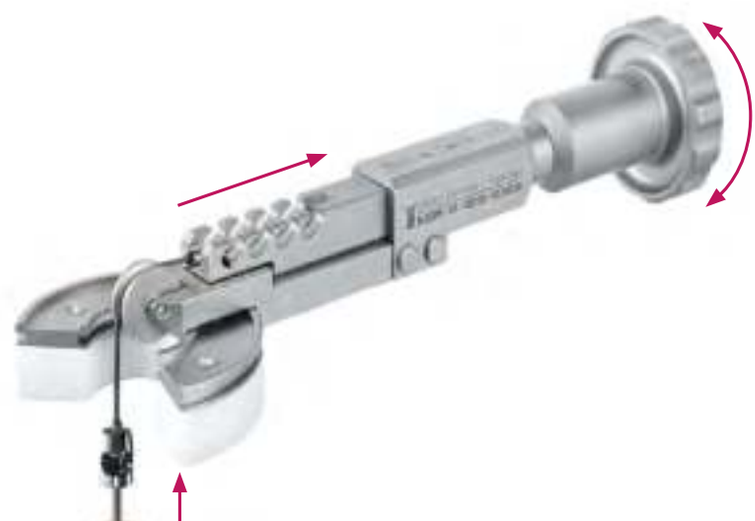
3. Drilling with the diamond coated twist drill should be in the axis and center of the root fragment. It should be approx. 7 mm in the hard tissue, deeper drilling will not be necessary. Drilling is performed with water-cooling. In order to remove drilling chips more easily, an inward and outward movement is recommended for deep drilling.

Recommended rpm:
500 - 700 rpm
REF **12.300.30 max. 3000 rpm**
REF **12.300.35 max. 2200 rpm**

4. According to circumstances, the short or long extraction screw with screwing support REF **12.300.47** is inserted.

5. The extractor is positioned on the adjacent crowns: The opening of the round, revolvable segment plate is adjusted in vestibular direction ensuring a good view of the extraction screw. After the pullrope has been hooked into the extraction screw, it is guided over the reverse roller and fixed to the hook of the extraction slide. Under slight traction – so that the rope does not hang out – the instrument is placed on the adjacent teeth by turning the hand screw.
During positioning it is important to see that both the screw and the rope do have the same axial direction.

6. Once the extractor is positioned properly, the extraction is carried out by turning the hand screw. In case of strong, long roots the periodontal fibres have to be pre-stretched for 30 seconds by applying a sub-maximum traction.



VIDEO
APPLICATION

ZEPF Xcision
Dr. Maty Design

The exclusive design and 25% reduced weight make the ZEPF Xcision-Instrument-Line light as a feather.

The ergonomic handle design enables uniform power transmission during pressing, pulling and rotary movements and is equally suited for both right handed as well as left handed practitioners. The unique tip design adapts exactly to the tooth and is beyond comparison to other instruments.

The smooth handle with circular openings makes the ZEPF Xcision-Instrument-Line extraordinarily easy to be cleaned since there are no more hygiene-critical zones as with instruments with serrated handles.

The ideal handling and tactual sensation is guaranteed.

From design to functionality, this product line answers all your concerns.
The ZEPF Xcision Handle is a registered model of **HELMUT ZEPF**, which has been developed with Dr. Maty.

Extracting Forceps

Pattern
All figures from **HELMUT ZEPF**
are available in the Xcision Pattern

Diamond-Coating
All extracting forceps are available with diamond-coating for better grip. For ordering etc. just add to the item number the letter **D**.

Teflon Disc
The wear-resistant Teflon Disc eliminates wear and tear in the joints and provides a light action at all times.

Grooved Gripping Surfaces
Grooved gripping surfaces provide a secure grip and prevent slipping.

Secure-Line

Our special **HELMUT ZEPF** Extracting Forceps in our modern ZEPF Xcision Design have tapered jaw tips. Their fine, sharp tips which have been anatomically shaped to match perfectly the teeth and allow to reach deep and large contact areas, which in turn provides better mechanical advantages and a more secure grip. Since these special **HELMUT ZEPF** Extracting Forceps have been designed for performing luxations, they have longitudinal grooves only on their jaws' gripping surfaces. The easy handling and superior "feel" of all our ZEPF Xcision Lines of Extracting Forceps are of prime importance for this product line!

Rescue-Line

No reason to panic! These forceps will allow you to carry out any extraction and work more efficiently even under complicated circumstances. If teeth break during extraction, these are the tools you need to rapidly, safely, solve your problems.
These forceps have special all-purpose jaws designed to cover a broad range of applications and have sharp pointed tips that allow separating the tips of roots from surrounding tissue by slightly twisting them and then securely trapping the extracted roots in the gaps between their jaws.
The article numbers of extracting forceps with serrated edges are amended by **'ZS'**.

ZEPF roba EDITION PATENTED

onyx DESIGN

ZEPF RoBa-Edition

by dentist Beck

Dedicated to the long-standing employees Mr. Horst Roos and Mr. Reinhold Bacher, who worked for Helmut Zepf for more than 50 years since their time as trainee.
The **ZEPF** RoBa-Edition completes the innovative advancement of the famous ZEPF Xcision Extracting Forceps. It has been developed under the aspects of a secure and gentle appliance.

The problem of tooth fractures during extraction is considerably reduced due to the innovative geometry of the beaks.

The new ONYX coating makes the impact-resistant surface of these extracting forceps almost indestructible.

Compared with other methods, in ONYX coating the carrier material is applied in a more gentle way, as ONYX coating in comparison to other coatings is performed with significantly less influence of heat.

The surface shows excellent sliding features to reliably counteract contamination. An incrustation of proteins etc. is not possible.

The matt-finished black surface not only prevents reflection of the OT light, but also guarantees an optimal contrast in the OR environment during extraction.

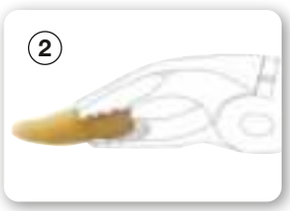
ZEPF roba EDITION PATENTED

With the patented RoBa-Edition **HELMUT ZEPF** introduces a new generation of extracting forceps. Deduced from the ZEPF Xcision Instruments the RoBa-Edition has been especially developed in consideration of easy and gentle extraction.

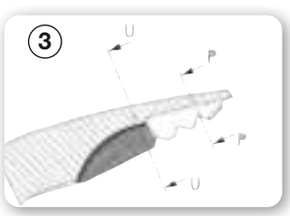
The patented RoBa-Edition according to Dentist Beck is the consequential advancement of conventional extracting forceps with the advantages of the tapered deep-grip extracting forceps. The modified beaks according to Dentist Beck fit exactly on the teeth which ensures a maximum grip in the appliance. These new beaks are available for all figures in upper and lower jaw (incisors, premolars, molars and wisdom teeth).

Due to the fact that all teeth show a convex crown contour (upper jaw: labial, buccal, palatal and in lower jaw: labial, buccal, lingual), the beaks have been developed under this anatomical conditions The handle is a protected design from **HELMUT ZEPF**, which was developed in cooperation with Dr. Maty, Germany.

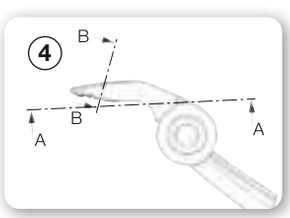
1 The serrated jaws grip onto into the teeth and avoid a “riding” in-between the tooth crown and the inner contour of the beak.



2 Concavely elaborated inner contours of the forceps beak fit in the convex tooth contour. With deep grip in the alveolus on the neck of the tooth or on the crown, the RoBa Edition ensures a parallel and maximum grip in any situation. Root fracture almost can be excluded.



3 The different deeply elaborated inner contours ensure maximal adaptation on the teeth in different actualities. No tilting of the teeth while rotary and / or lifting movement.



4 Tapered outside contour of the beak affords deep grip even subgingival.

onyx DESIGN

Black Finish Coating

Design meets functionality.
Users with highest demands will appreciate the elegant, black finish providing the instrument with a non-reflecting, extremely smooth and scratch-resistant surface. The article number is complemented by **TI**.

Refreshingly Innovative

The new generation of extracting forceps in the patented ZEPF exLOG Design was designed to meet the special requirements of gentle removal of teeth. To meet these requirements, we composed a programme of 11 extracting forceps figures out of more than 400 existing figures.
These were chosen according to anatomy, ergonomics and hygiene.

35A

5.4. | 4.5.

15.035.01

The exLOG Forceps offer an excellent anatomic fit and only need enough pressure so they do not slip out of the hand. The forceps guarantee a balanced axial luxation, better periodontal fibre dilatability and increased sense of touch. They reduce traumata of surrounding tissue.
The assimilated handles allow an individual and equal power transmission for left- and right-handed surgeons during pressing, pulling and turning movements.
Due to the smooth handles and the possibility of dismantling, the exLOG Forceps can be cleaned extremely well.
So there are no hygiene-critical areas any more like they are known from forceps with conventional lock. Especially with automatic reprocessing in a washtray the disassembly is a great advantage as they need less space.

All Advantages on One View:

- excellent anatomic adaptation on the tooth surface
- tapered beaks for less trauma and protection of the alveolar loculus
- linear serrated jaws for equal axial luxation
- better fibre dilatability and increased sense of touch
- optimal cleaning through the demountability of the forceps into two parts (RKI-compliant)
- long lasting, patented, high precision joint for radial and axial mechanical load
- made out of one piece (5-axis CNC-milling) for ultra high precision
- no maintenance of the joint necessary

Focus on the exLOG, the standard of tomorrow.

A NEW STANDARD IS DEFINED

exLOG

exLOG PATENTED

ZEPF roba EDITION PATENTED

ZEPF EXLOG RoBa Edition Extracting Forceps

With the new exLOG RoBa Edition ZEPF introduces a new generation of patented extraction forceps. Two patented extraction forceps are combined into one.

The EXLOG Forceps characterized by the fact that it's easy to disassemble and the RoBa characterized by its patented jaws.

It made sense to combine both patents as the combination results in a type of forceps which is easier to clean than ever before and additionally offers the dentist a functional extraction tool which leaves no desire unfulfilled.

These patented forceps are the consequent development of conventional forceps with the advantage of tapered and deep grip extraction forceps. The modified jaws exactly match the tooth and guarantee a maximum grip during the application.

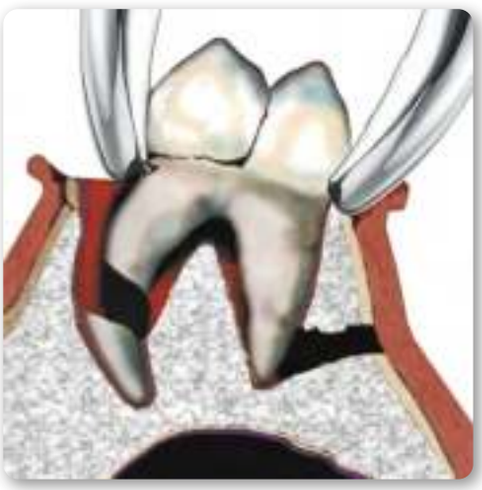
ZEPF roba EDITION PATENTED

ZEPF EXLOG RoBa Edition Extracting Forceps

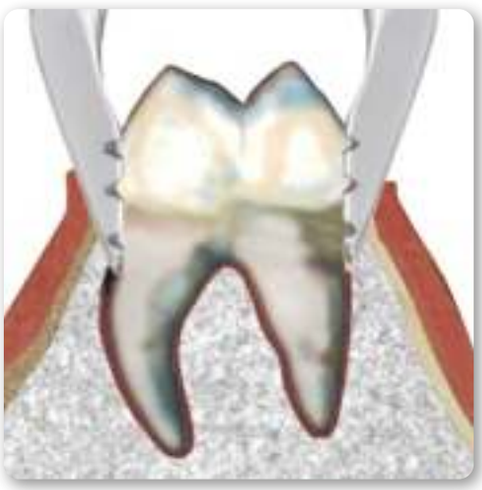
This new development involves all figures for maxilla and mandible (incisors, premolars, molars and wisdom teeth).
As every tooth shows a convex crown shape (maxilla: labial, buccal, palatal – in the mandible: labial, buccal, lingual), the jaw was developed according to these anatomical conditions.

- excellent anatomical adaption on the neck of the tooth surface
- tapered jaws for less traumatization and for conservation of the alveolus
- better fibre dilatability and increased sense of touch
- optimal cleaning due to the possibility to disassemble the forceps into two pieces (RKI compliant)
- long life time, patented, high precision joint for radial and axial pressure
- produced from one piece (5-axis CNC milling) and therefore ultra precise
- no maintenance of the joint



The following problems might occur if the extraction forceps are not suitable:

- root fracture
- crown fracture
- damage of the soft tissue caused by bruising
- damage of the alveolar ridge and the buccal bone lamella



Advantages of deep-grip extraction forceps:

- due to the specially shaped jaws it is easy to place the forceps subgingivally directly on the root (below the gingival margin)
- parallel contact on the root
- atraumatic, as the soft tissue is not bruised
- root fractures are avoided
- slim jaw design for subgingival grip without bruise of the soft tissues

Instruments

In the illustrations an extraction under use of the Xtodi Instruments is shown.

IMPORTANT: Complete removal of all inflammable and convective tissue structures.

1. Initial loosening of the desmodontal fibres. Apply the X-Desmo-Tool first approximally then buccally and palatinally (pencil handle).

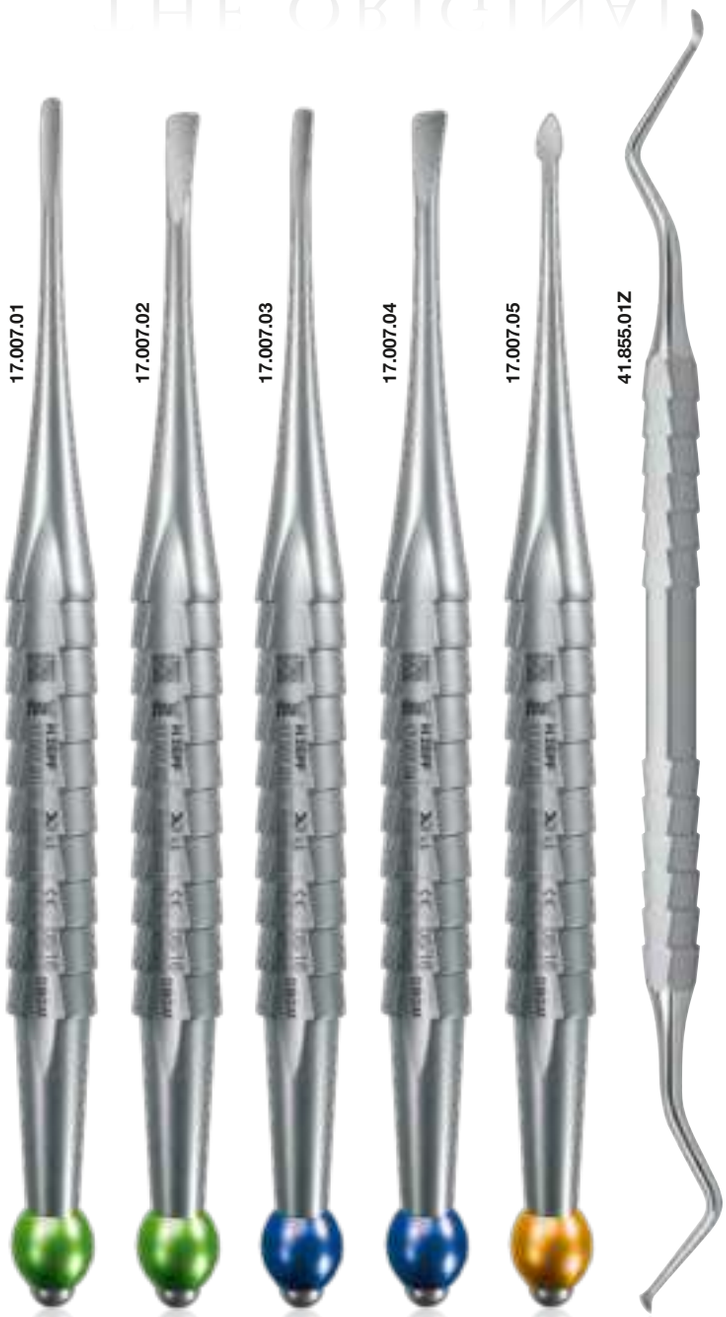
2. Then progressive luxation with the X-Luxa-Tool (first narrow then wide). Ideal positions: Approximal (mesial or distal) to the tooth which should be extracted!

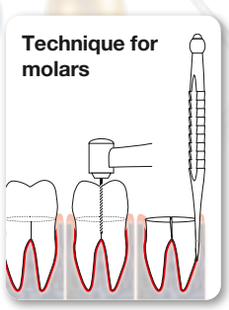
3. Complete luxation of an upper right molar with support of a wide X-Luxa-Tool. Gentle extraction without root fractures!

4. Inspection of the empty tooth socket and curettage with support of the X-Spoon.

Xtodi
Acc. to Dr. Detlef Hildebrand

THE ORIGINAL





Xtool Instruments

Acc. to Dr. Detlef Hildebrand

THE ORIGINAL

The implantology with immediate insertion after the tooth extraction is more and more a focus of interest in modern dentistry. It appears to be more than necessary to protect soft and hard tissue structures already during the extraction phase and to follow the principles of minimal invasiveness. Here is an ideal complement for this:

The Xtool Instruments! In contrast to existing instruments this clearly arranged and universal Xtool Set supports you during the gentle and uncomplicated extraction of teeth which cannot be preserved.

Modern therapy methods require modern instruments!

- Color coding for clear handling.
- Universal and complete extraction instruments in one tray.
- Ergonomic handle design (pencil-design) prevents unintended slipping during usage.
- Direct and controlled power transmission to prevent tooth and root fractures.
- Non-traumatic tooth extraction without injuring surrounding structures.

onyx Black Finish Coating

Design meets functionality.
Users with highest demands will appreciate the elegant, black finish providing the instrument with a non-reflecting, extremely smooth and scratch-resistant surface. The article number is complemented by **TI**.

H-Tool Set
acc. to Dr. Hildebrand

H-Tool Set

acc. to Dr. Hildebrand

The new H-Tools developed by Dr. Hildebrand are a continuation of the successful X-Tool concept.
The instrument tips are very flat and sharp pointed.
The instruments are inserted along the root axis and the alveolar cavity is widened by advancing the H-Tool apically along the root of the tooth to be extracted with gentle hammer blows.

The light ferrozell hammer with a diameter of 35 mm enables work to be carried out safely.
Thanks to the extremely light construction, this hammer produces a far less unpleasant feeling in the patient than using a hammer with hard plastic inserts or in the worst case with a metal head.

Content: H-Tool Set

Illustration	Article Description	Description
	**17.009.00** H-Tool Set acc. to Dr. Hildebrand organized in a washbasket, including a Ferrozell hammer and H-Tools, consisting of:	Complete set
	**41.503.01** Hammer, Ferrozell head Ø 35 mm, 100 g, total weight 180 g, 250 mm long, fitting washbasket	1 piece
	**17.009.01** H-Tool #1, straight, tip 3.5 mm, green ball	1 piece

ZEPF-Xtod-Tray

DBGM acc. to Dr. Detlef Hildebrand

“Extraction in its most pleasant way”

The ZEPF-Xtod-Tray offers a universal instrument set for medical tooth extraction. The Xtod instrumentation includes six different instruments:

17.007.05 straight

17.007.02 straight

17.007.01 straight

17.007.03 curved

17.007.04 curved

41.855.01Z curved

41.855.01Z Lucas Scraper, 2.5 mm, double-ended, 17.5 cm

- **X-Desmo-Tool (yellow):**
The X-Desmo-Tool easily penetrates into the periodontal gap with its pointed tip and initially loosens the Sharpey’s Fibres. The modified pencil handle and the handy shaft shape offer a depth sensibility like never experienced before without destroying related structures.

- **X-Luxa-Tool-3 (blue):**
bent + narrow
for tooth loosening

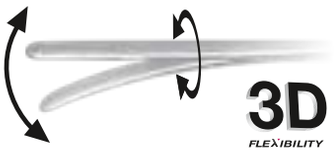
- **X-Luxa-Tool-1 (green):**
straight + narrow:
A delicate and controlled power transmission guarantees a specific loosening and luxation of the tooth without any risk of crown or root fractures.
Ideal position: approximal (mesial or distal) to the tooth which is to be extracted.

- **X-Luxa-Tool-2 (green):**
straight + wide:
Complete, non-traumatic luxation of upper molars (e.g. tooth 16). The ergonomic instrument shape ensures a gentle extraction without tooth fractures or any damage to the alveolar wall.

- **X-Luxa-Tool-4 (blue):**
bent + wide:
for tooth luxation

- **Lucas Schaber ZEPF-Line:**
Inspection and curettage of the empty dental alveolus. Complete removal of all inflamed and connective tissue fibres.

ZEPF *FLEX*-EX Power Periotome



26.690.10 ZEPF *FLEX*-EX Power Periotome

While using new materials, we were successful in the development of the ZEPF *FLEX*-EX Power Periotome, a symbiosis of Power Periotome, Elevator and Xtool.
The flexible working tip will enable you to build up a phenomenal pressure for the luxation in a radial direction and a perfect match to the contour of the tooth at the same time without bending. The name stands for the excellent product features united in this instrument.

ZEPF Power Periotome

The Power Periotomes allow a gentle loosening of ligaments in the sulcus.
The handle allows optimal power transmission and controlled luxation.

26.690.01 Power Periotome, P1 XL, purple

26.690.02 Power Periotome, P2 XL, mesial, blue

26.690.03 Power Periotome, P3 XL, distal, green

Ergonomical and heavy

Heavy, ergonomic handle design with exchangeable tips, for optimal access to all quadrants.

26.182.01

P1, straight, Ø 2.5 mm, 2.5 x 17.8 mm

26.182.02

P2, straight, Ø 2.5 mm, 1.7 x 14 mm

26.182.03

P3, angulated, Ø 2.5 mm, 1.7 x 12.5 mm

26.182.04

P4, mesial / distal angulated, Ø 2.5 mm, 1.7 x 12.5 mm

26.182.00 Periotome Handle

17.045.00 Approximal Desmotome, # 0, straight, 3 mm, exchangeable, M 4 x 0.5, single-ended

17.045.04 Approximal Desmotome, # 4, distal bending, 3 mm, exchangeable, M 4 x 0.5, single-ended

17.045.05 Approximal Desmotome, # 5, mesial bending, 3 mm, exchangeable, M 4 x 0.5, single-ended

41.834.11 **Hemingway Sharp Spoon**, double-ended, exchangeable, stainless steel, **ZEPF**-Line

ZEPF-Line 2 in 1 Periotomes

The 2 in 1 Periotomes acc. to Dr. Karl-Ludwig Ackermann are saving time as they are reducing the annoying exchange of instruments.

26.182.23 **Periotome Combination P3/P2**
ZEPF-Line, double-ended, exchangeable inserts

26.182.24 **Periotome P4 / straight Sharp Spoon Ø 3.0 mm**
ZEPF-Line, double-ended, exchangeable inserts

ZEPF-Line Periotomes

For the Separation of the Sharpey's Fibers in the Sulcus

Before the usage of any root elevator or extraction forceps it is necessary to separate the Sharpey's Fibers in the sulcus with a periotome in order to do an atraumatic tooth extraction. To do so, the periotome is to be pulled through the sulcus.
The correct application saves the gingiva and the periosteum. The special design in the grip area guarantees a pleasant grip and extremely easy handling.

26.182.11 **ZEPF**-Line, exchangeable

26.182.12 **ZEPF**-Line, exchangeable

26.182.13 **ZEPF**-Line, exchangeable

Root Elevators

Root elevators are used for the surgical tooth extractions. They are used to luxate the tooth in the osseous alveolus and to expand the alveolus walls. They are also used to open the gingival sulcus prior to the tooth extraction.

Straight instruments are used in the anterior region and in the maxillary area. Curved root elevators are ideal for the back teeth in the mandible.

The Workmanship

The shafts of **HELMUT ZEPF** Root Elevators are welded onto their hollow handles, and each and every one is checked for leakage at their welded joints.
This manufacturing method virtually eliminates the leakage compared to cheap root elevators with pressed-in shafts.

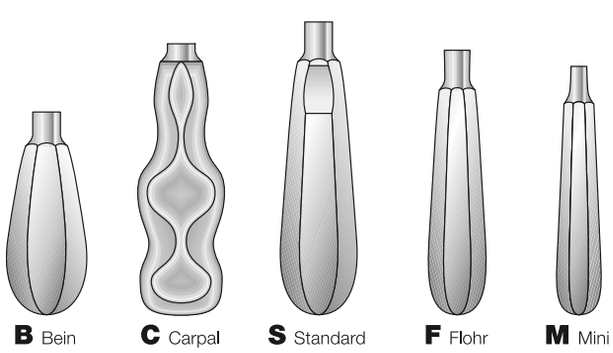
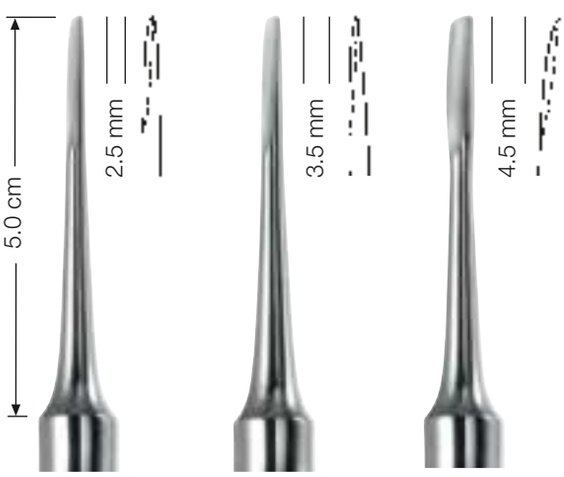
The Handle Versions

Except for the Xtool-Series, the Elevators from **HELMUT ZEPF** mainly differ in their 5 different handle designs such as: 'Bein', 'Carpal', 'Standard', 'Flohr', 'Mini'.

These are handle versions which can be assigned easily due to their letter coding:





Gärtner
(B) 17.013.00

Gärtner
(B) 17.013.01

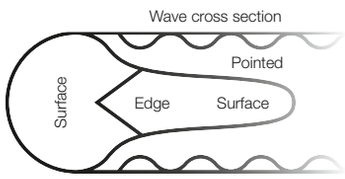
Modified Root Elevator Beck



(S) 17.200.01 2.8 mm

(S) 17.200.02 3.5 mm

(S) 17.200.03 4.0 mm

(S) 17.201.01 3.5 mm

(S) 17.201.02 3.5 mm

The elevator works during the luxation step with 5-7 supporting points (Hypomochlion), which avoids slipping through because of the different surfaces around the radius, instead of a common round-edged instrument, which works with 1-2 supporting points only.

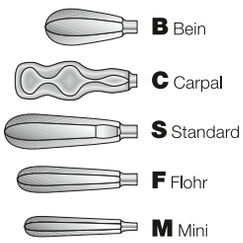
This makes the Beck Root Elevator much more effective.

Instructions

(1) Because of the elliptical shape of the instrument tip, it is easy to penetrate the interdental space with this instrument.

(2) Due to the shape, by turning the instrument through 180° it is possible to luxate in four directions:
2 x mesially and 2 x distally.

(3) **Attention!** These instruments must not be used as a lever, as shown e.g. in picture 3. Due to the special shape, an over-strengthening of the tip can cause breakage. We cannot be held responsible for damages caused by improper use.



Heidbrink Root-Splinter Elevators

All-purpose instruments for gently extracting root splinters.

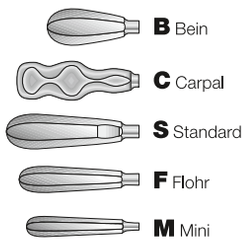
17.056.03 Heidbrink, serrated

Root Elevator No. 195



The drop-shaped, blunt working end makes the new **ZEPF** Root Elevator No. 195 ideal for the separation and luxation of roots. The tapered working end allows its special use in the molar region in all quadrants. It can also be used for initial loosening of the desmodontal connection.

Due to its geometry and smooth luxation and rotary motion, the root fragment to be removed will be moved very easily in “crestal direction” (in relative terms!). The luxated fragment can therefore be grasped easily with deep-gripping forceps or with Luer bone rongeur forceps.

Picture:
Courtesy of Dr. Florian Steck

(S) 17.195.00 Root Elevator No. 195

Lindo-Levien Root Elevators

The LINDO-LEVIEN Root Elevators are pushed into the periodontal gap in apical direction until the serrations will grip on the roots. The root is extracted via a barb effect by straight pulling without leverage.

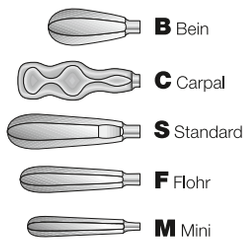
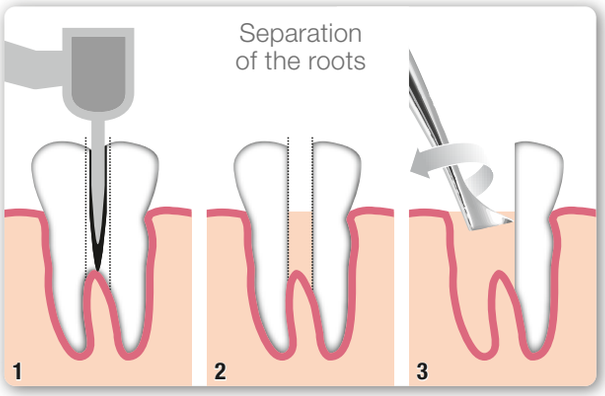
Root Elevators Cryer and Winter

Claw elevators are ideal to extract molars in the mandible after separation of the roots.





The bend of the working ends, combined with the shortened tips, allows a gentle lifting of the opposite root without contact to the neighboring crown.
The special claw elevators are ideal to luxate roots if an apical access is possible from the neighboring alveolus, e.g. if a root has already been removed and if the empty alveolus can be used as access. It is recommended first to remove the root which is bent less.

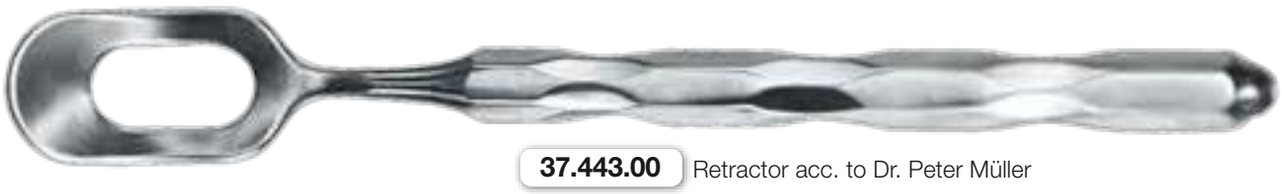
The **ZEPF** Retractor

pat. pend. by Dr. Peter Müller, Ebersbach



37.443.00 Retractor acc. to Dr. Peter Müller

Clear, non-tiring retraction in every situation

Retraction of the cheek, lips, tongue and mucoperiosteal flap. The **ZEPF** Retractor is a “quality product from Tuttlingen” and bears the name **HELMUT ZEPF** as seal of quality.

- ergonomic handle
- low-weight, very well-focused instrument
- innovative design
- multipurpose usage
- good view
- smooth surface, manufactured from one piece
- all common disinfection and sterilization methods possible

Vestibulum Retractor

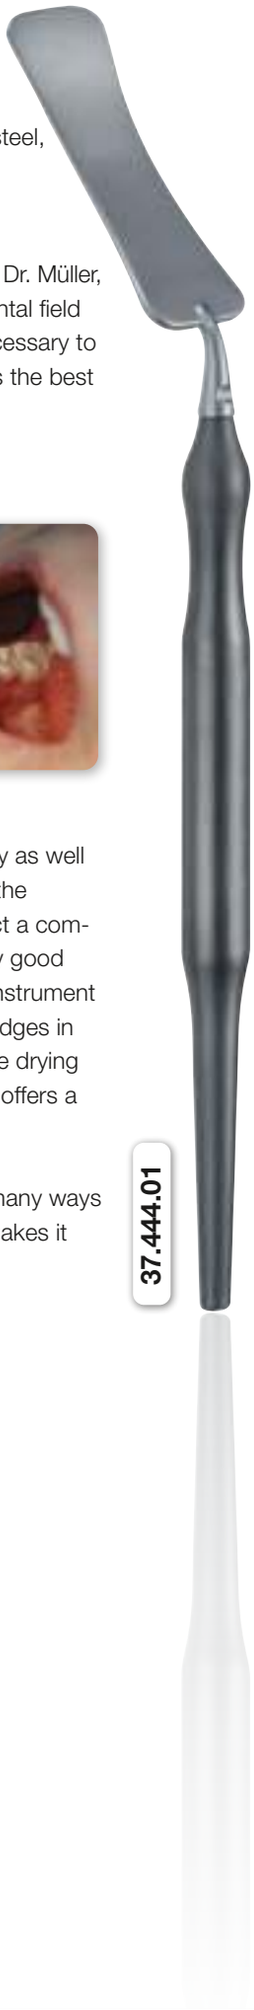
acc. to Dr. Müller, Tuttlingen

Working end made of stainless steel,
handle M 4.5 mm,
Dr. Ti, made of titanium.

The Vestibulum Retractor acc. to Dr. Müller, Tuttlingen can be used in the dental field for all activities for which it is necessary to have a very good view as well as the best possible dryness.

The application in periodontology as well as in oral surgery is possible as the Vestibulum enables you to retract a complete quadrant. This offers a very good view on your field of work. The instrument can also be used to model the edges in the acrylic technique. The relative drying is possible with one hand which offers a better moulding.

The instrument can be used in many ways and is very easy to apply. This makes it very economical.



37.444.01

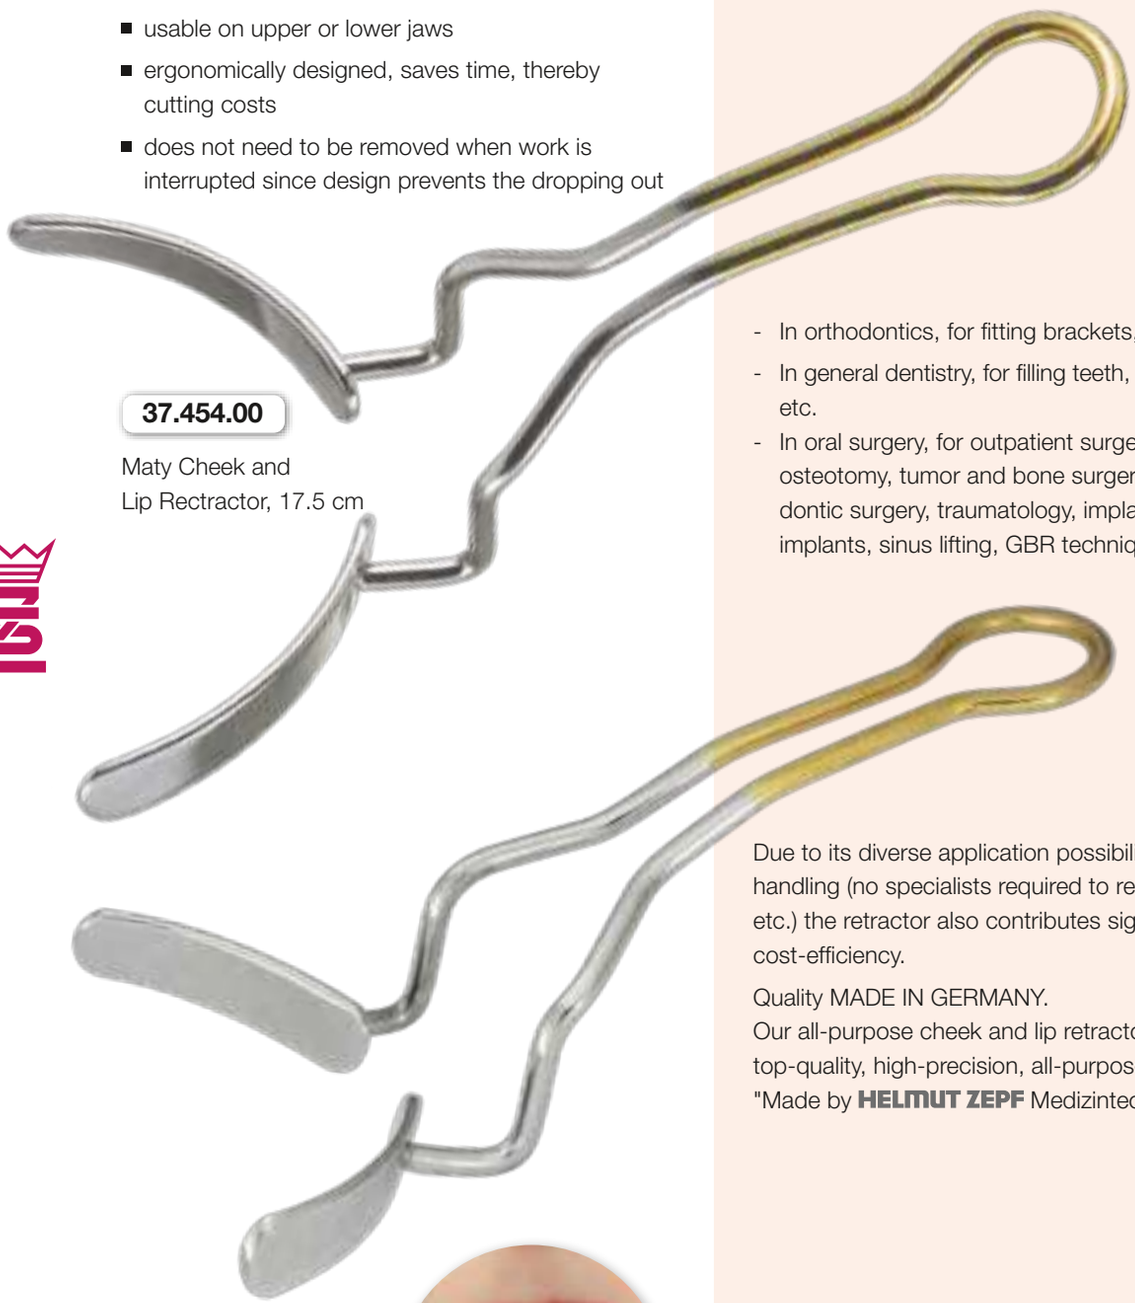
Special features of the
Maty Cheek and Lip Rectractors:

- suitable for a wide variety of applications
- lightweight
- easy to use
- patient-friendly
- no traumatization of the oral cavity
- usable on upper or lower jaws
- ergonomically designed, saves time, thereby cutting costs
- does not need to be removed when work is interrupted since design prevents the dropping out

Maty Cheek and Lip Retractor

The light weight, versatility and anatomically shaped jaws of this instrument makes it suitable for use in a wide variety of applications in all areas of dentistry.

In prosthodontics, for safe impression technique, determining upper / lower jaw mismatches, fitting crowns, bridges, inlays, etc



37.454.00

Maty Cheek and
Lip Rectractor, 17.5 cm

- In orthodontics, for fitting brackets, etc.
- In general dentistry, for filling teeth, root-canal work, etc.
- In oral surgery, for outpatient surgery (apicoectomy, osteotomy, tumor and bone surgery, etc.), preprosthodontic surgery, traumatology, implantology (enossal implants, sinus lifting, GBR techniques, etc.)

Due to its diverse application possibilities and easy handling (no specialists required to retract lips, cheeks etc.) the retractor also contributes significantly to cost-efficiency.

Quality MADE IN GERMANY.
Our all-purpose cheek and lip retractor is yet another top-quality, high-precision, all-purpose instrument "Made by **HELMUT ZEPF** Medizintechnik GmbH".

Laster special retractor for upper impacted wisdom teeth, sandblasted handle, polished working tip and micro serration, 100 mm

ZEPF Vestibulum Retractor

acc. to Kapogianni

The **HELMUT ZEPF** Vestibulum Retractor according to Kapogianni is mainly used for the region of the lateral teeth in the upper jaw.

It is meant for the atraumatic holding of the prepared mucoperiosteal flap which is usually retracted in the area of the crista zygomaticoalveolaris. The crista often develops a distinctive osseous bow which makes it impossible to hold it away with a straight retractor.

This instrument is of great advantage especially during operations like the direct sinus lift, big augmentative interventions or other operations in the area from the cuspid to the rear lateral teeth.

Because of the three-dimensional arrangement of both retracting elements of this Vestibulum Retractor, the mucosa is retracted safely and a trauma due to continuous slipping is excluded. Of course, this retractor can be used for anatomically similar bone structures for safe and atraumatic working.

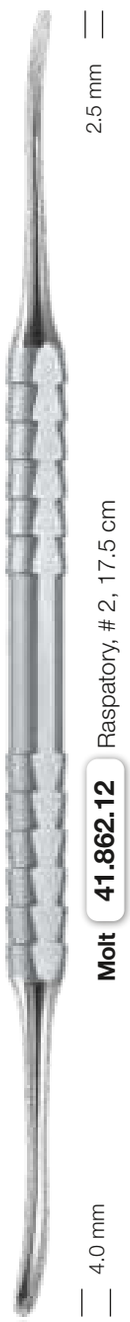
ZEPF -Raspatories

Perfectly done.

HELMUT ZEPF Periosteal Elevators have a well-balanced design. The lame-design handles have a very handy shape. They are extremely easy to rotate, and due to the smooth surface, hygiene problems known from conventional handles are avoided.



Prichard

An arrester and raspatory, all in one.

Usable in all types of periodontic surgery, osteotomy, or root-tip resections. Its sharp, rounded tip is used for preparing papilla / loose tissue for excision. In periodontic treatments, its blunt tip allows arresting several flaps of loose tissue simultaneously. The curvature of its blunt tip makes it also a popular choice for osteotomies in the molar area (8-area), as well as for mirror raspas, since its contacting surfaces are highly polished. Lingual surfaces may be very easily reached.

Controlled dropping of the blade

ZEPF Blade Holder Drop-Control

The **ZEPF** Drop-Control® Blade Holder combines the design of the regular blade holder 46.007.00 with a new and revolutionary function.
With reference to the mechanism of a ball pen, the blade will be dropped off by pushing the button at the end.

The object of this development was a simplified application with the same diameter of the blade holder. Therefore there is no need to adapt to a new application / ergonomics for our regular blade holder! The **ZEPF** 'Drop-Control®' Blade Holder perfectly fits into our **ZEPF** Design product range for surgery, implantology and microsurgery thanks to its diameter, design and ergonomics.

By pressing the button at the end of the blade holder the mechanism which lifts the blade is triggered off. The blade is pushed forward so that it falls safely and controlled in a tray or cup.

Afterwards the one-hand ejection function moves back in its initial position. After cleaning and sterilization you can insert a new blade – as usual.

The advantage lies in the fact that the used blade can be removed in a safe and controllable way in order to prevent a contaminated injury or infection.

ZEPF Onyx Scissors

onyx

The Onyx coating offers a 3-5 times higher surface hardness compared to traditional scissors. In combination with the “Supercut” grinding (see page 06-32), this guarantees an extremely long product life and application with very high precision and wear resistance.

The extraordinary surface smoothness is leading to an easy slide of the scissor blades even under highest strain. Due to the physical / chemical combination of the coating, no undesirable reaction will be caused during sterilization or usage of solvents. Furthermore, the anti-glare surface avoids disturbing light reflections.

The article numbers are complemented by **TISC**. For further information on the illustrated scissors, please refer to the following pages.

46.201.13TISC

46.051.11TISC

46.081.16TISC

46.431.14TISC

46.057.11TISC

What is SC?

SC stands for “Supercut” and means that scissors with that designation have been specially ground, not only to make them sharper than ordinary scissors, but to yield a much better cutting angle (cf. the accompanying illustrations). One ring is golden.

What is TC?

TC stands for “Tungsten Carbide”, a material whose superior strength wear resistance and hardness are its major properties that distinguish it from conventional materials. Both rings are golden.

Fine Preparation Scissors

The curved blunt Preparation Scissors are used for preparation in the least traumatic way of separating tissue into connective tissue layers.

The surgeon pushes the scissor parallel to the skin or to the level of the layers which should be separated (picture 2), opens the scissor and pulls it back in an opened position.
The tissue layers are separated by spreading movements of the scissor blades and the required layer is opened (picture 3).
The tip of the scissor is usually facing the less sensitive structures.

In the second instance the scissor is used for cutting.

23.105.50

ZEPF Bone Holding Forceps
acc. to Dr. Howard Gluckman

Dr. Howard Gluckman

Specialist in Periodontics, Implantology and Oral Medicine
Director of Implant & Aesthetic Academy, Cape Town, South Africa

“Bone holding forceps that I have tried so far are always very difficult to handle and some require 2 hands to use them effectively. A big problem for me was that the forceps usually got in the way and made screwing the bone blocks into position difficult. This inspired me to create a bone holding forceps that allowed one to effectively hold the bone plate or the bone block and at the same time having adequate space for the bone screws and driver.
The holder is easy to use with one hand due to the ratchet design and firmly grips either the bone plate or block on its own, thereby allowing fixation of the plate at the desired distance from the bone; if you utilise the Khoury technique; or to hold both bone block and recipient site thereby enabling easy bone fixation. The bone vice is designed to work with both large and small blocks.”

41.506.17

Mead Hammer with exchangeable plastic inserts, 19 cm

Hammer, Ferrozell

The big hammer lies perfectly in the hand. Due to its (woodlike) material consistency, it offers a superior feeling in osteotomizing. No feel of metal, no loosening of plastic inserts – You always have the feeling of hitting perfectly and of regulating the pressure and the speed…
A true miracle of dental surgery and a must for each OT Set – not only for “big” surgeons!

The **ZEPF** ECO ImplaTool Set in cobalt-blue **24.961.05** or lightred-magenta **24.961.06**.
Out of his own experience Dr. Hildebrand came up with a complete instrument set for the whole oral surgery and the treatment in the implantology and periodontalogy. No matter if classical or new conceptions, like sinus elevation or microsurgical interventions, all demands can be covered.
Special raspatories, elevators and dissecting instruments enable and simplify surgical procedures and mainly non-traumatic operations. The exchangeable working tips inserted in the ergonomic BIONIK handle offer highest economy and best tactile handling.
Clearly organized in a washbasket – so everything is always easily at hand for the practitioner.

Bone Scraper

Collecting autologous bone material.

In oral surgery bone replacements and bone structures are often combined with autologous bone pieces during augmentations in order to use their osteoinductive effect. The Bone Scraper is the perfect instrument for an easy and quick collection of autologous bone structures. It enables you to scrape, collect and transplant the patients' own bone. Everything can be done without the usage of bone filter, trephine bur, saw or bone mill.

The blade makes a collection of cortical and spongious bone possible.
The bone is collected in a chamber during the scraping and at the same time the bone is being mixed with blood. The bone material can be implanted directly out of the Bone Scraper which has been sterilized before.

47.957.00 Ø 10 mm, **ZEPF**-Line, in closed position, 15.6 cm

Open position, the bone material can easily be taken out of the chamber

47.957.01 **Spare blade** for 47.957.00

ZEPF Bone Scraper II

By using the Bone Scraper, instruments like bone filters, trephines, saws and bone mills are no longer necessary. Its blades allow a fast harvesting of cortical and cancellous bone. The cost-efficient disposable blade offers the practitioner an always sharp and economical instrument.

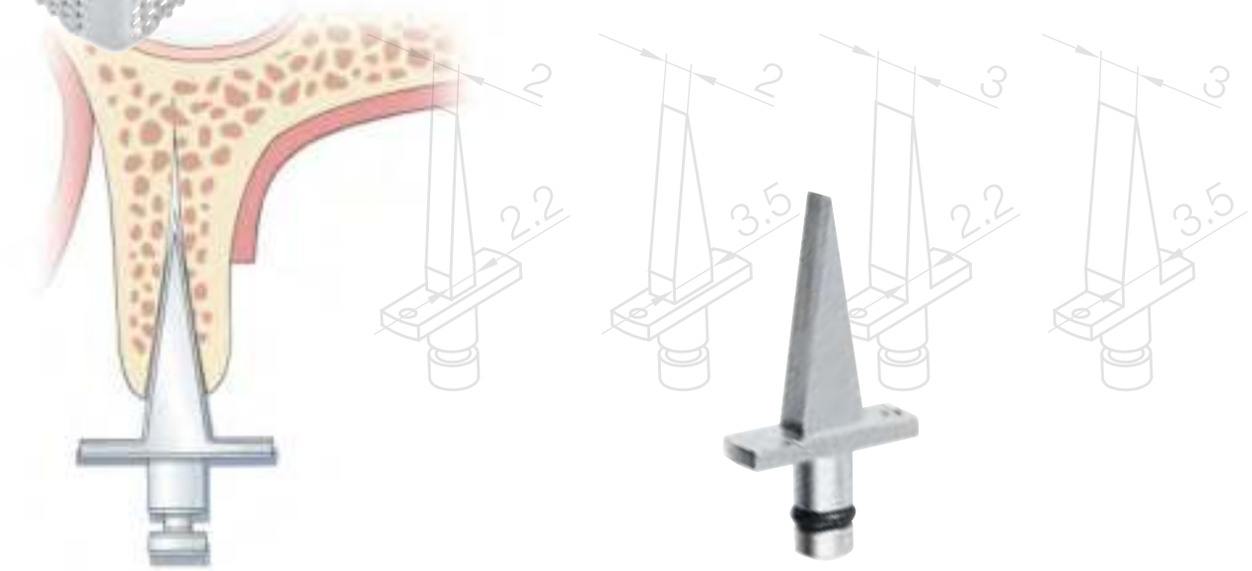
Bone Splitting System
acc. to Dr. Vollmer & Dr. Valentin

Bone Splitting System

acc. to Dr. Vollmer & Dr. Valentin

A successful implantation primarily depends on sufficient bone in the region of the alveolar process and especially on the quality of the bone. Only a stable bone structure can guarantee a safe anchorage of the implant.
In addition to modern augmentation methods, the bone splitting technique is becoming more and more important.

The principle is based on the creation of a similar alveolar cavity in the maxillary crest with a good potential of regeneration.
For this indication, the experienced implantologists Dr. Vollmer and Dr. Valentin have developed exactly adapted system components for different anatomical situations in co-operation with the company .



Comparison: Drilling without previous spreading

At first, the maxillary crest which has become too small due to atrophy is being separated in its longitudinal direction by diamond discs. Thereafter, it is split carefully by means of chisels. In doing so, the lateral cortical bone lamellae are preferably displaced in labial direction.

After these preparatory steps, small wedges are inserted in the gap. In each case, two wedges are used as placeholders for the drilling of the implant bed and the insertion of the implant.

While drilling, the bone lamellae are reliably prevented from springing back. Upon insertion of the implants and removal of the inter-implantatory wedges, the remaining gaps can be filled with augmentation material in order to allow an augmentation and, in opportune cases, an immediate and simultaneous implantation.

Bone Fitting Set

acc. to Dr. Hohl & Dr. Hildebrand

47.949.95

Bone chisels are used to gain bone chips, to shape bone structures and to widen bones from the cranial side. The pointed chisels are used for the first widening of the maxillary crest. The flat chisels smoothen and shape bone structures.

OST-Sets – Variable Geometry Osteotomes

acc. to Pavel Krastev DDS

VGO

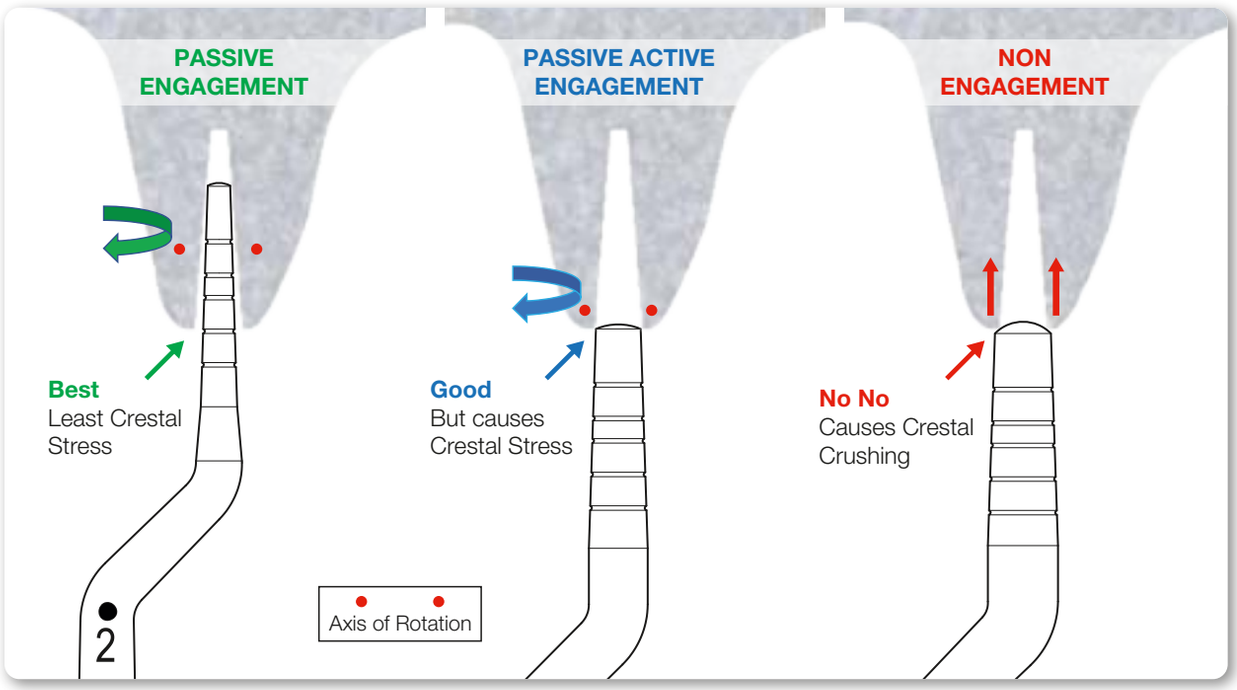
PATENTED

Advantages of the VGO Osteotomes

- ZERO HEAT PRODUCED!
- ALWAYS PASSIVE ENTRANCE!
- DECREASED CRESTAL STRESS!
- FULL CONTROL OF RATE OF DILATION!
  since hand-piece is not used at constant speed
- REVOLUTIONARY FLEXIBILITY OF USE
  All Osteotomes on the market may look alike, but they are **not**! We offer a unique stepped formula for tip escalation and a revolutionary flexibility of use like no other system on the market.

3 MAIN MODES OF USE!

ZEPF VGO MODE: **PASSIVE ENGAGEMENT (Stepped Escalation)**
ZEPF HYBRID MODE: **PASSIVE ENGAGEMENT (Linear Escalation)**
ZEPF STANDARD MODE: **PASSIVE ACTIVE ENGAGEMENT / NON ENGAGEMENT**
not recommended



Bone is Gold: PASSIVE WAVE DILATION SYSTEM

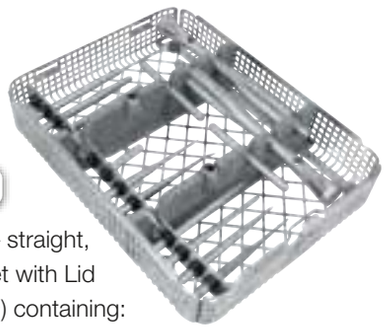
acc. to Pavel Krastev DDS

How do we manage the osteotomy ATRAUMATICALLY? How do we manage the osteotomy for greater implant success? Bone is Gold, so how do we hurt the bone less? How do we mallet less, as to make procedure less unpleasant for our patients?

Let us control the bone as opposed to having the bone control us.

Because of the overlapping diameters of the VGO Osteotomes, you are able to passively engage the previously made intrabony cavity, even when you didn't use the full length of the tip.

PASSIVE ENGAGEMENT – successive osteotome fits freely into the previous intrabony cavity and becomes active at a point deeper than crestal bone, as is currently done by the new **ZEPF VGO** way.
PASSIVE ACTIVE ENGAGEMENT – when a traditional Summers Osteotome is used to full working depth of tool, the next tip will engage previously made intrabony cavity passively and will start being active immediately as it progresses further into cavity.
NON ENGAGEMENT – when next osteotome is used, it simply does NOT fit the intrabony cavity created by previous osteotome. This is what occurs when traditional Summers Osteotomes are used to partial depth of tip.



ANTERIOR VGO OST-Set

with 7 straight screw osteotome inserts, numbered from 0-6

- Tips have first 8 mm threaded
- To produce micro cuts in bone
- Increased bleeding and better angiogenesis
- No malleting needed
- Tip-0 is unique in straight kit (Ø 1 – Ø 2 mm)
- Tip-0 to accommodate thin anterior ridges
- Provides precision marking tips for immediate placement

47.990.00

VGO OST-Set – straight, in a Washbasket with Lid (REF 85.194.22) containing:

Included in both sets:

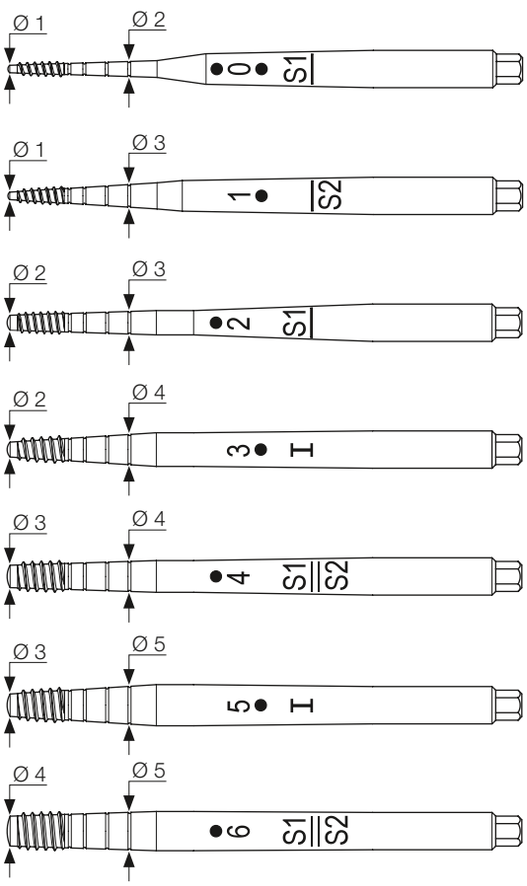
17.710.00 Z-Shape Universal handle & instrument holder for inserts with HEX-adapter, AF4, sandblasted, 2 pieces included in the set

47.990.06 Precision Marking Tip, bent, scale 8/10/13/16 mm

47.990.08 Precision Marking Tip, straight, scale 8/10/13/16 mm

Straight Screw Osteotomes in the VGO OST-Set

Exchangeable with Hex Connection for Z-Shape Universal handle



47.990.10 Screw Osteotome Insert straight, size 0, tapered Ø 1 - 2 mm, convex shank Ø 2 mm, scale 8/10/13/16 mm

47.990.20 Screw Osteotome Insert straight, size 1, tapered Ø 1 - 3 mm, convex shank Ø 3 mm, scale 8/10/13/16 mm

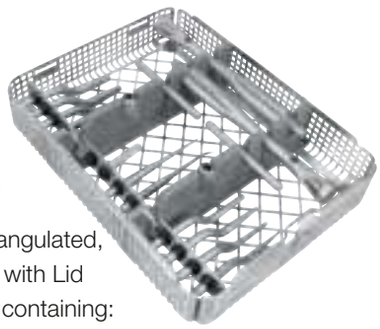
47.990.30 Screw Osteotome Insert straight, size 2, tapered Ø 2 - 3 mm, convex shank Ø 3 mm, scale 8/10/13/16 mm

47.990.40 Screw Osteotome Insert straight, size 3, tapered Ø 2 - 4 mm, convex shank Ø 4 mm, scale 8/10/13/16 mm

47.990.50 Screw Osteotome Insert straight, size 4, tapered Ø 3 - 4 mm, convex shank Ø 4 mm, scale 8/10/13/16 mm

47.990.60 Screw Osteotome Insert straight, size 5, tapered Ø 3 - 5 mm, convex shank Ø 5 mm, scale 8/10/13/16 mm

47.990.70 Screw Osteotome Insert straight, size 6, tapered Ø 4 - 5 mm, convex shank Ø 5 mm, scale 8/10/13/16 mm



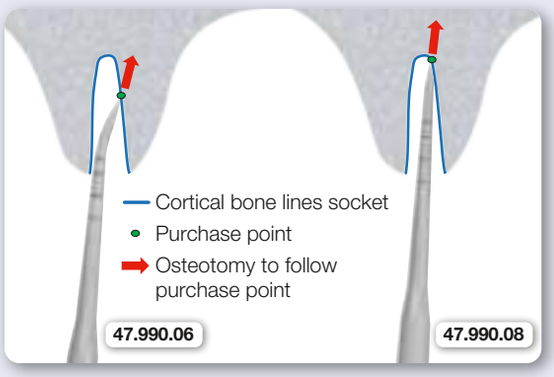
47.991.00

VGO OST-Set – angulated,
in a Washbasket with Lid
(REF 85.194.22) containing:

POSTERIOR VGO OST-Set

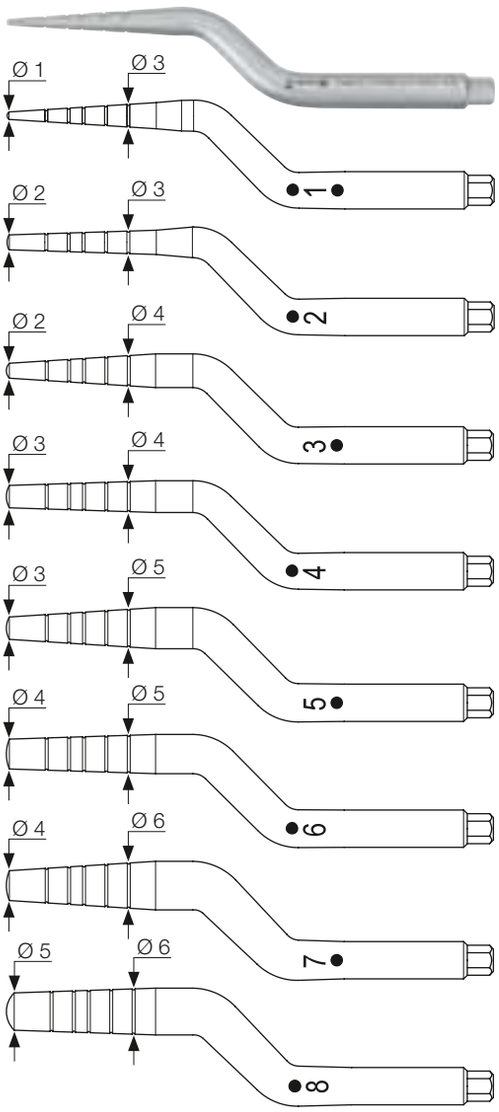
with 8 angulated osteotome inserts, numbered from 1 - 8

- No threads since turning motion limited
- 5 mm mark placed on all tips to mark threshold for crestal lift
- 5 mm is minimum available bone recommended for crestal lift
- Tips have same taper as tips 1 - 6 for straight kit
- Two additional tips (7 and 8) to accommodate wider ridges typically found in posterior area
- Provides precision marking tips for immediate placement



Application of the Precision Marking Tips

To be used during immediate placement surgery to initiate osteotomy offset towards palatal. Rotary drills usually slide down bone due to angle at which the osteotomy is initiated.



Angulated Osteotomes in the VGO OST-Set

Exchangeable with Hex Connection for Z-Shape Universal handle

47.991.10 Osteotome Insert angulated, size 1, tapered Ø 1 - 3 mm, convex shank Ø 3 mm, scale 5/8/10/13/16 mm

47.991.70 Osteotome Insert angulated, size 7, tapered Ø 4 - 6 mm, convex shank Ø 6 mm, scale 5/8/10/13/16 mm

47.991.80 Osteotome Insert angulated, size 8, tapered Ø 5 - 6 mm, convex shank Ø 6 mm, scale 5/8/10/13/16 mm

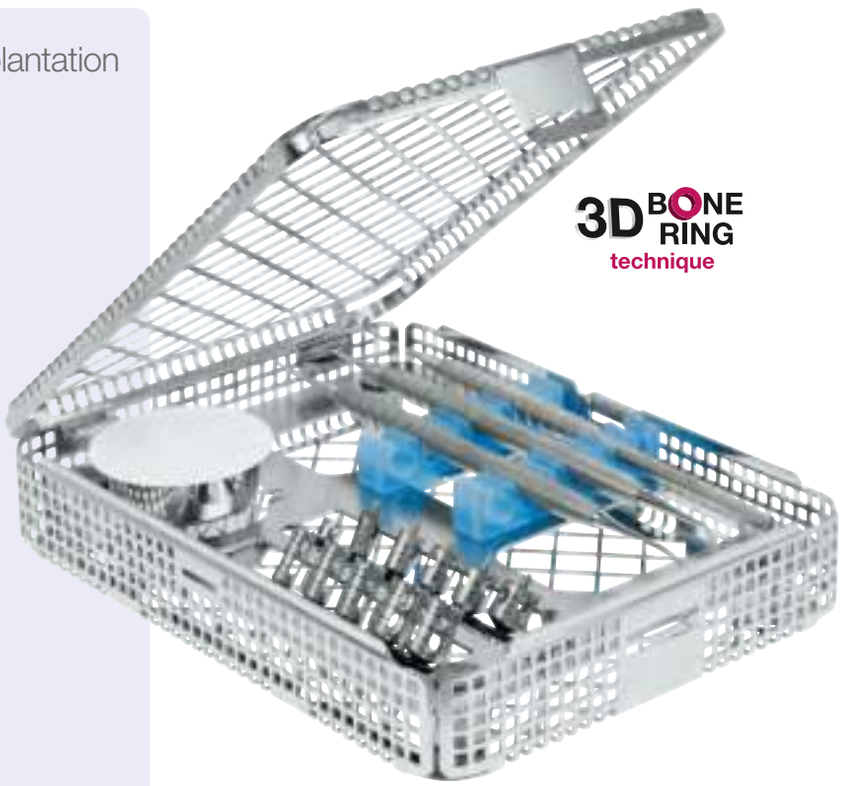
3D One Step Augmentation & Implantation

acc. to Dr. Bernd Giesenhagen

In co-operation with Dr.Giesenhagen, the company **HELMUT ZEPF** has developed a new set for the One Step Vertical Augmentation with ring-shaped bone transplants.

The aim of this development is an accelerated implant treatment. Thereby, the safety of the implantological success as well as the convincing result for the patient and the user have priority. In many cases, this new augmentation method can be used to build up the bone base for the insertion of one or more implants.

Particularly suitable for the vertical augmentation of the highly atrophied and distal mandible (pic. 2). With this newly introduced technique, perfectly fitting ring-shaped bone transplants are removed from the chin-, retro-molar region or from the palatal area (pic. 1) by means of trephines and fixed immediately in the receiving area (pic. 3) with a screw implant.



47.500.31

Complete Set with washbasket 85.184.18 and instruments; without optional accessories

VIDEO APPLICATION

Dr. Bernd Giesenhagen, the inventor of this procedure, and **HELMUT ZEPF** have selected a special range of instrumentation for precise and time-saving steps of treatment in order to ensure an optimal function.

Application

The local cortical bone structure with spongious parts of vital cells guarantees a safe fixation with short healing time.

The filling of possibly existing cavities is usually made by spongious chips taken from the donor area or by bone substitutes.

For an additional coverage of the augmented area with a barrier membrane we recommend our **HELMUT ZEPF** Augmentation Kit 47.966.00.

Metal Ring for Ring Applicator 47.099.25 – for holding bigger bone rings with Ø 9 mm

Trephines

Trephines are used for a gentle and precise removal of an implant. They are used to win bone texture and to excavate implants accurately. The trephines are manufactured of stainless steel.
The grading is visibly laser-marked onto the burs and guarantees a secure depth orientation.

The windows in the body offer a better view for the excavation of the implants and make it easier to reject fragments.
The bur stand offers a safe and perfectly clean storing and easy positioning through a snap-in system.
The marking of the rack allows a fast and uncomplicated identification of the trephines.

ZEPF Bone Crusher

With this Bone Crusher we introduce a proven alternative to the more complex bone mill. Insert the bone piece into the crusher and use the Pusher in order to crush the bone. If necessary, you may additionally use the hammer 41.509.00.

47.955.00

Bone Crusher, Body, Sleeve, Pusher, Baseplate Ø 20 mm, stainless steel

47.955.10

Teflon Support for Bone Crusher
After using the hammer, turn the Pusher 90° and crush again. With this movement the cutting edge is turned on the bone. After that, the desired result should be achieved.

Bone Mill Forceps

For gaining autogenic bone material.
In order to correct bone defects, an intraoral harvesting of bone is often necessary. Pieces of bone may be gained with trephines or chisels. It is the aim of the Bone Mill Forceps to cut bone material into small pieces so that a maximum volume of bone chips can be achieved. The “grainy” consistency of bone chips created will ensure that it is adapted most favourably to osseous embedding.

47.958.03

Handle Bar with Screw

47.958.01

Upper Titanium Milling Part, rigid

47.958.04

Lower Titanium Milling Part, rotating

Advantages of the Bone Mill Forceps:

- Titanium Bone Mill Inserts
- Mill Inserts are detachable and exchangeable
- no loss of bone material
- conform to the RKI guide-lines because of easy cleaning
- specially designed new forceps, which allow parallel closing of the working parts, which allows a maximum milling result
- stop screw avoids direct contact of the milling parts, due to this protection the milling parts will last longer

47.958.00

ZEPF Bone Mill Forceps, Titanium Milling Part, demountable

ZEPF bonemill

47.954.01

ZEPF Bone Mill,
to crush autologous bones,
with helically toothed milling part

47.954.55

Extension Bar for the rotary handle 47.954.50, to increase the lever effect

47.954.35

Helical toothed Milling Part
for Bone Mill 47.954.01 and to be mounted in 47.954.00 / 47.954.01
(This new milling part can be ordered and subsequently be mounted in an older type of Bone Mill by the user himself).

ZEPF Bone Mill

Bone Mill, to crush autologous bones. In order to correct bone defects, bone harvesting is necessary elsewhere. Bigger bone pieces or bone-blocks can be removed by using trephines.
The **ZEPF** Bone Mill allows to crush bone in order to produce the greatest possible volume of bone graft. The grainy consistence of the produced bone graft guarantees an optimal adaption on the bone.

The extension bar which can be adapted on the rotary handle facilitates an optimized power transmission and torque. The new Bone Mill with helical toothed milling part makes milling easier.

Advantages of the HELMUT ZEPF Bone Mill:

- easy handling
- quick assemby / disassembly without additional tools
- no loss of bone material (even in the case of small quantities)
- easy cleaning

Sinus Elevators
acc. to Dr. Meiselbach

The 3 Sinus Elevators acc. to Dr. Meiselbach enable a gentle and atraumatic sinus floor elevation in all areas.

Due to their special shaping the Elevators are an ideal addition to the Universal Sinus Instruments.

41.848.51 Sinus Elevator 1 acc. to **Dr. Meiselbach**, 2.3 mm, blunt

41.848.52 Sinus Elevator 2 acc. to **Dr. Meiselbach**, 3.0 mm / 2.3 mm, blunt

41.848.53 Sinus Elevator 3 acc. to **Dr. Meiselbach**, 2.3 mm, blunt

41.868.07 **Kirsch**, Sinus 7, Plugger Ø 5.0 mm, Spoon 8 x 10 mm, Titanium **ZEPF**-Line Handle, double-ended, 17.5 cm

47.530.00 Cleaning Instrument to collect autologous bones

Universal Sinus Instruments

For implantological treatment in the maxilla, in case of missing vertical bone in the direction of sinus maxillaris.

Advantages:

- angled instruments ergonomically and anatomically optimised
- atraumatic preparation and lifting of the sinus mucosa
- effective working due to a wide range of different angles

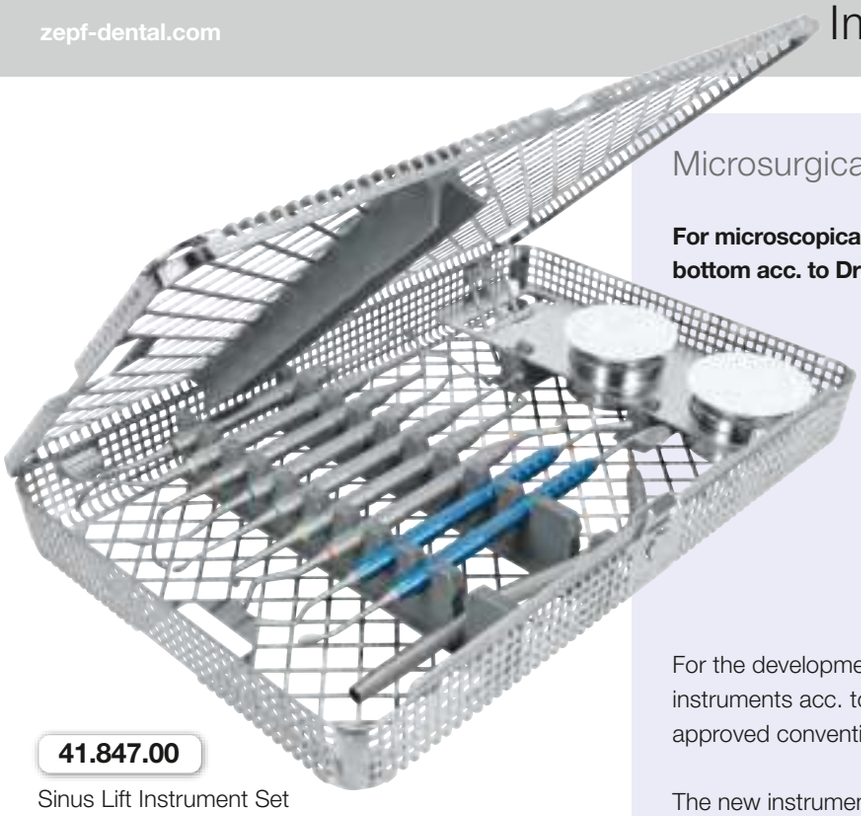
41.848.01 Sinus Elevator, double-ended, 4.8 mm / 4.2 mm, blunt

41.848.02 Sinus Elevator, double-ended, 6.5 mm / 4.0 mm, sharp

41.848.03 Sinus Elevator, double-ended, 7.3 mm / 8.0 mm, sharp

41.848.05 Sinus Elevator, double-ended, 4.4 mm / 8.5 mm, blunt

41.848.08 Sinus Elevator, double-ended, 4.2 mm / 3.6 mm, blunt



Microsurgical Sinus Lift Instruments

For microscopically guided elevation of the sinus bottom acc. to Dr. Behnam Shakibaie-M.

41.847.00

Sinus Lift Instrument Set
for microscopically guided elevation of the sinus bottom acc. to Dr. Shakibaie-M.
incl. 1 x washbasket 85.195.00 and
instruments illustrated on page 07-26/27

For the development of the new microsurgical sinus lift instruments acc. to Dr. Shakibaie-M., we resorted to the approved conventional shapes of sinus lift instruments.

The new instruments are approx. 60 % smaller, they were sharpened and the surface was abraded. Under appropriate optical magnification and illumination of the operation field (operation microscope or magnifying glass), those features offer the following essential advantages:

- The reduction of the instrument size allows the preparation of a minimalized antral window without restricting the qualities of elevation or augmentation.
- The sharpening of the instruments allows a precise initial fracture of the bone layer which is as thin as parchment. The initial fracture is possible as soon as the window is prepared by rotating the instrument, without injuring the Schneider's membrane.
- The delicate coarseness of the surface of the instruments prevents the unpleasant reflection of light from the operating microscope or the magnifying glass.

In addition, the working tips of the instruments were bent in accordance with the reduced sinus lift window.

Finally, the instruments were also numbered and color-coded to allow an easy, chronological use.

Thus, the surgeon is able to increase the safety during elevation of the sinus bottom and to apply this technique in a minimally invasive way for the patient.

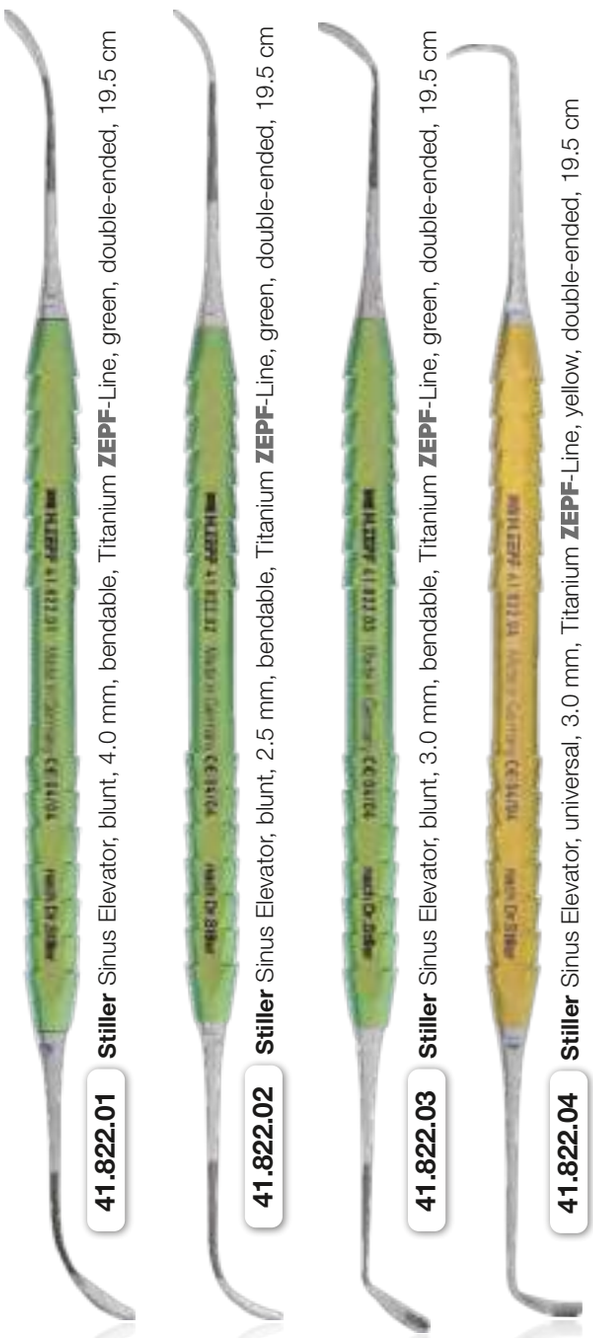
Sinus Instrument Set acc. to Prof. Dr. Dr. Stiller

Immediate sinus floor elevation
with or without bone cover

The Sinus Instrument Set has been developed together with Prof. Dr. Dr. Stiller and is particulary suited for difficult maxillary sinus structure (septa, maxillary pillars, scarred mutations in change with intact maxillary sinus mucosa).

Advantages of the system:

- Instruments which are adapted and adjusted perfectly to the anatomical conditions in the maxillary sinus.
- Flexible working ends. Instruments are pre-bended for the normal enantral anatomy.
- Two different kinds of instruments with blunt and sharp edges for dissecting mucosa on plane and rough internal surface of the maxillary sinus.



41.822.01 **Stiller** Sinus Elevator, blunt, 4.0 mm, bendable, Titanium **ZEPF**-Line, green, double-ended, 19.5 cm

41.822.02 **Stiller** Sinus Elevator, blunt, 2.5 mm, bendable, Titanium **ZEPF**-Line, green, double-ended, 19.5 cm

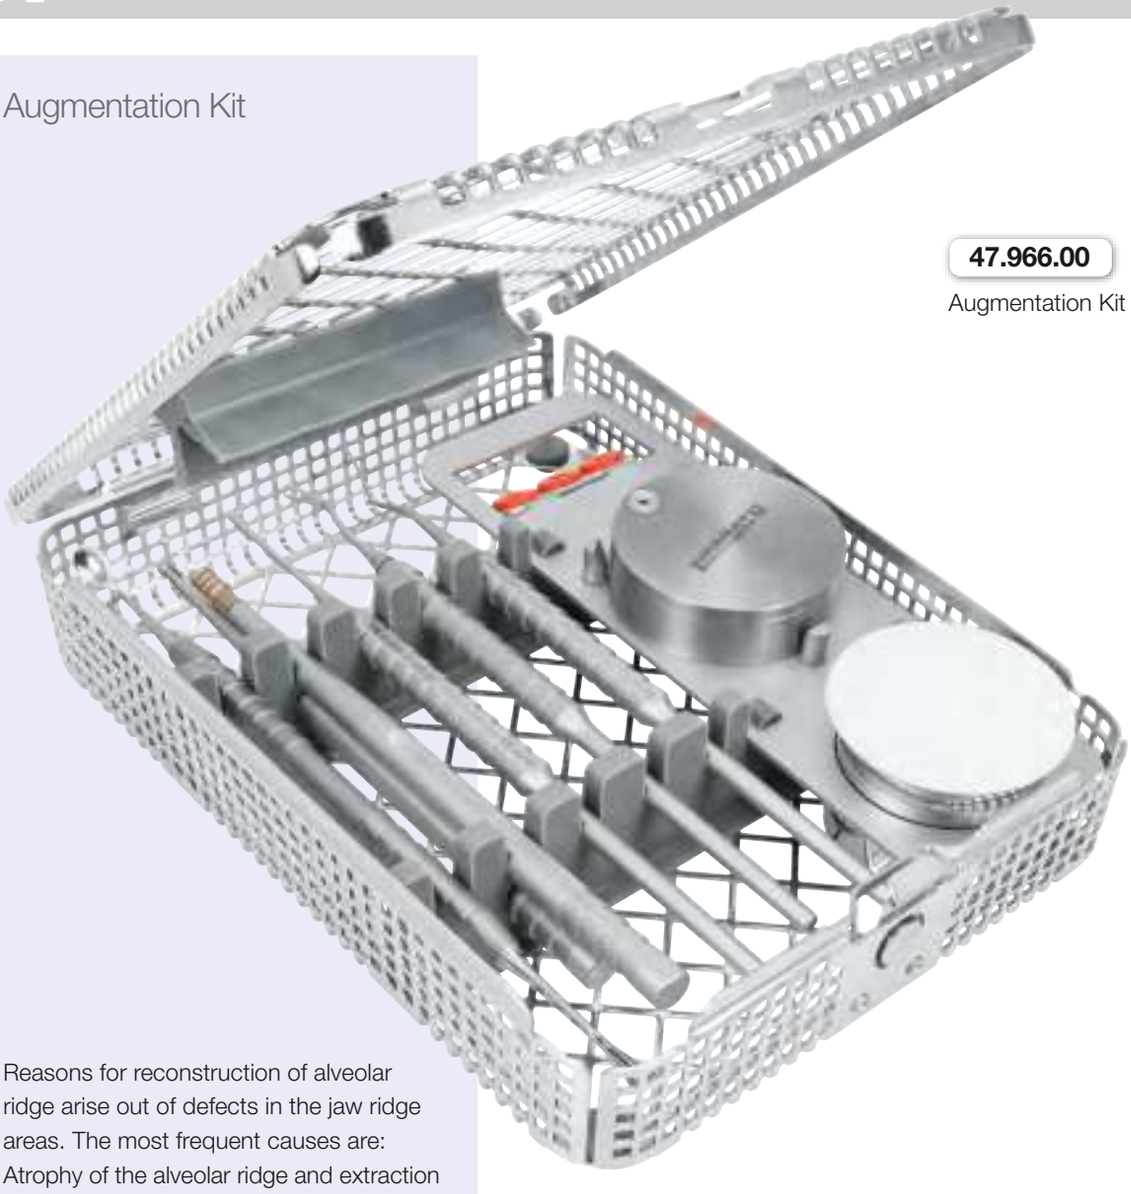
Augmentation Kit



47.966.00
Augmentation Kit

Reasons for reconstruction of alveolar ridge arise out of defects in the jaw ridge areas. The most frequent causes are: Atrophy of the alveolar ridge and extraction defects.

Out of esthetic reasons alone, in visible areas, these defects need to be reconstructed.

The augmentation is carried out with autologous bone and titanium foil. The bone implants are covered with a titanium foil after application. To avoid dislocation of the augmentation material below the membrane, the membrane is fixed with at least 2 pins.

The titanium pins with 3 mm or 5 mm length are taken out of the storage box by means of the applicators and pressed into the bone through the foil or membrane.

85.255.02
Storage Box for 10 titanium pins, optional

Illustration	Article Description	Order Quantity
	**47.966.00** Augmentation Kit, consisting of: Pin Membrane Probe, Pin Applicator, Perforation Raspatory, Sinus 7 Instrument, Titanium Pin 3 mm (10 pieces) / 5 mm (5 pieces), Sinus Elevator # 2, Mixing Cup, Storage Box, 1/2 Washbasket with Lid 85.194.15	1 set

ZEPF Augmentation Material Applicator

The Augmentation Material Applicator supports the fractional filling of the subantral area with particulate augmentation material. To compact the augmentation material you use a sinus plugger.

The instrument with diameter of 5 mm is loaded laterally.

The augmentation material can be applicated precisely with the injecting mechanism.
The instrument can be taken apart for optimal cleaning.

19.714.16

ZEPF Augmentation Material Applicator Ø 5 mm, straight, with a lateral opening to insert the augmentation material

Drilling Sleeves acc. to Prof. Dr. Yildirim

Flag Holder Kit consisting of
08.917.05 - .20 in bur stand

Krekeler Sliding Caliper

31.693.10

Sliding Caliper acc. to Prof. Dr. med. dent. Gisbert **Krekeler** for measuring of implants with locating screw

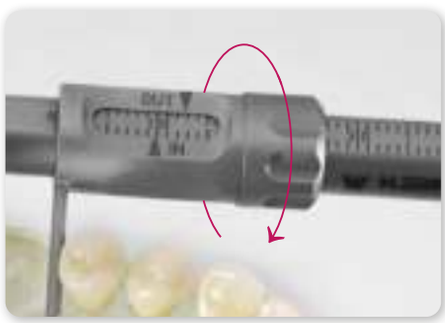
Acc. to Prof. Dr. med. dent. Gisbert **Krekeler**
Modif. Dr. med. dent. Sven Marcus Beschnidt

The Sliding Caliper combines a variety of functions in one instrument, thus facilitating the positioning of implants and enlarging the precision.

The measuring rods have a thickness of exactly 1.5 mm and allow immediate control of the maximum diameter of the implant which has to be inserted. (In order to assure maximum stability, please chose the largest diameter). Scientific examinations proved that the wall of the bone should have a thickness of at least 1.5 mm in order to avoid bone resorption after implantation. If the sliding caliper with its two measuring rods is inserted in the interproximal gap and opened in such a way that the measuring rods touch the respective root of the neighbor teeth, the maximum possible diameter of the future implant is shown on the marking IN. The upper marking OUT shows the determined outside dimension.

The new locating screw, at the end of the caliper, allows a fixation of the measured result. This practice-oriented development represents a significant relief with regard to a **more precise, quick and and secure work**.

OUT shows the determined outside dimension (Ø 1.5 mm), **IN** shows the inner diameter.



Locating screw for a safe fixation of the measured result.

The hole serves as drilling gauge and drilling guide. The marking allows the determination of the ridge.

Metal Ruler

48.286.08 Metal Ruler, 100 mm

31.691.13

Bone Caliper for measuring the maxillary bone, radial scaling on the shanks of the ring handles, 13 cm

Palatal Knife

acc. to Dr. med. dent. Iman Mizani, MS

The novel Palatal Knife offers an innovative alternative to the conventional scalpel for the preparation of connective tissue graft.
The special design of the instrument promotes faster and safer graft removal. At the same time, the risk of injury to the palatine artery and perforation of the palatal flap is minimized.

Special features:

- angled cutting edge, perpendicular to the palatal bone
- ergonomic, angled instrument neck / shaft
- depth gauge (graduation) for precise dimensioning

Advantages over conventional removal methods:

- enhanced safety through reduced risk of injury to the palatine artery and perforation of the palatal mucosa
- simple and ergonomic handling
- fast, precise preparation of the graft
- consistently uniform thickness of the connective tissue graft
- abrading work and cutting in difficult-to-reach places

46.040.15

Palatal Knife
acc. to Dr. med. dent. Iman Mizani, MS

Application:

① Singular palatal incision and formation of a flap

② Preparation to gain connective tissue, using the instrument

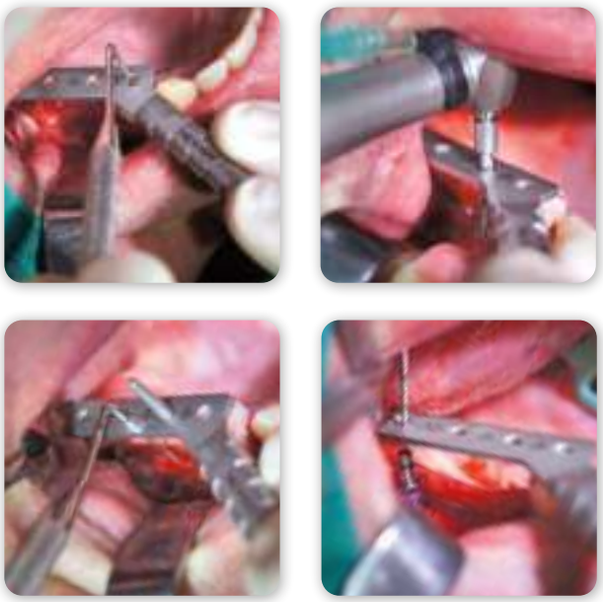
③ Dissection of the prepared connective tissue below the flap, removal of connective tissue as soon as the base is detached from the palatal bone

Implant Guide

for the posterior tooth region, according to Wiedemann

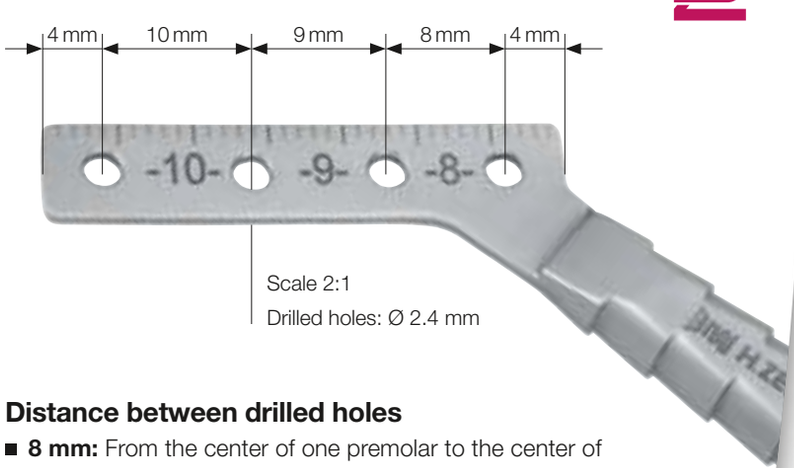
This method quickly and effectively finds the optimal position for the implants in the posterior region.
Here, a standard tooth width is assumed.
Premolars 8 mm, molars 10 mm, so 1/2 premolar = 4 mm, 1/2 molar = 5 mm

The standard tooth widths used are neither scientifically nor individually 100% correct, but these values deliver highly usable implant positions particularly on edentulous jaws.



31.683.00

Drilling Template
acc. to Wiedemann



Scale 2:1
Drilled holes: Ø 2.4 mm

Distance between drilled holes

- **8 mm:** From the center of one premolar to the center of the next premolar (1 x 4 mm + 1 x 4 mm), e.g. center of number 4 to center of number 5.
- **9 mm:** From the center of one premolar to the center of a molar (1 x 4 mm + 1 x 5 mm), e.g. center of number 5 to center of number 6.
- **10 mm:** From the center of one molar to the center of the next molar (1 x 5 mm + 1 x 5 mm), e.g. center of number 6 to center of number 7.

If no premolar is available as a starting point then a canine can also be used. For this, a distance between the mesial end of the working part and the first hole of exactly 4 mm was chosen (1/2 premolar width).

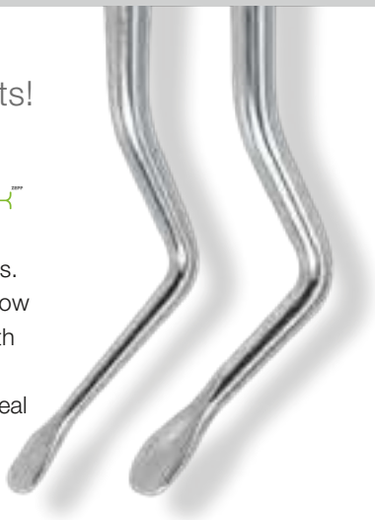
ZEPF Tunneling Instruments

2 NEW **ZEPF** Tunneling Instruments!

Tunneling Instruments with a new angle
By request of several users, the modified bionik™ Tunneling Instruments from **HELMUT ZEPF** have now been supplemented with two new instruments. The instruments curved beyond the working tip allow even better access, especially in the posterior tooth region. Available in two sizes, depending on the extent of tunneling, the user can now select the ideal instrument for his / her purposes.



46.040.00

Set for tunneling technique, consisting of:
1/3 Washtray,
Tunneling Instruments
1 upper jaw 46.040.01,
2 lower jaw 46.040.02,
3 upper / lower jaw
combination 46.035.20

Tunneling Instrument # 3, 1.8 mm, 45° angled

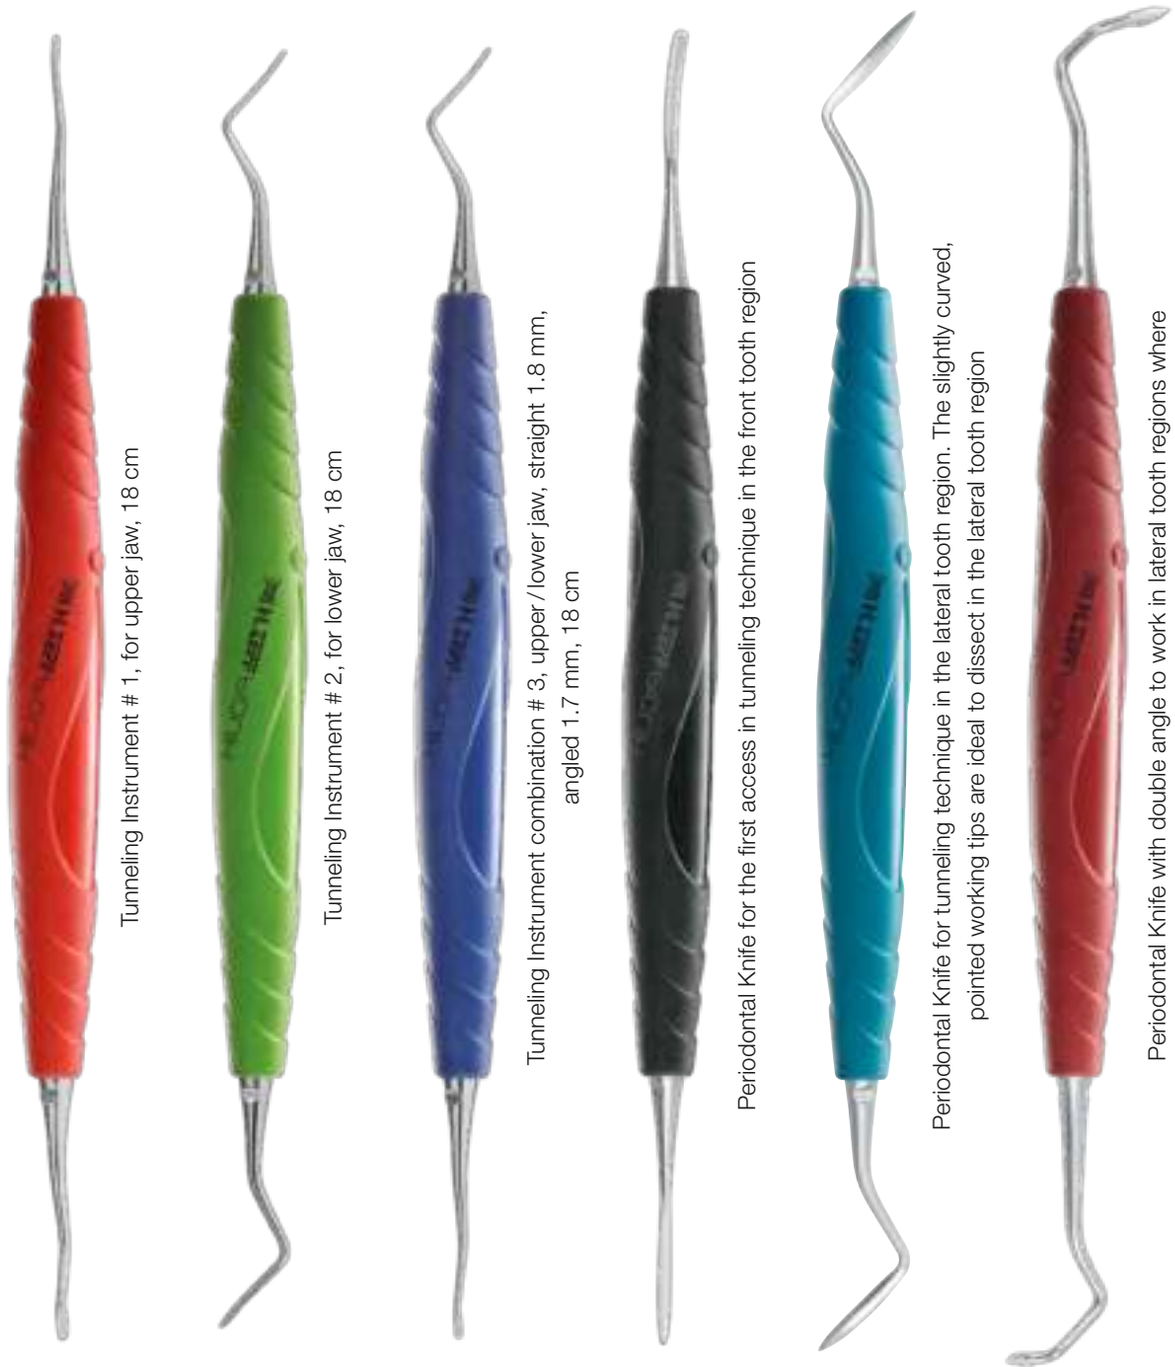
ZEPF Tunneling Instruments

In microsurgery, **HELMUT ZEPF** BIONIK Tunneling Instruments find their application in the preparation of flaps or subsequent reconstructions of the alveolar ridge or for root coverings with a connective tissue graft.
The instruments allow a minimally invasive tunneling preparation to avoid large openings. Due to the fine shape delicate tunneling incisions in the tissue are possible.



Tunneling Instrument # 1, for upper jaw, 18 cm

Tunneling Instrument # 2, for lower jaw, 18 cm

Tunneling Instrument combination # 3, upper / lower jaw, straight 1.8 mm, angled 1.7 mm, 18 cm

Periodontal Knife for the first access in tunneling technique in the front tooth region

Periodontal Knife for tunneling technique in the lateral tooth region. The slightly curved, pointed working tips are ideal to dissect in the lateral tooth region

Periodontal Knife with double angle to work in lateral tooth regions where access is difficult.

41.017.17 Double-Action Micro Needle Holder, transmitted, **ZEPF**-Line, 17.5 cm, tungsten carbide, serrated, jaw width 0.6 mm, SpinLock

SpinLock TECHNOLOGY BY HELMUT ZEPF

What is the ZEPF SpinLock?

The parallel lock known from standard needle holders has been replaced with the new SpinLock technology. This avoids that the suture material gets caught up on the needle holder.

conventional lock

The **HELMUT ZEPF** Double-Action Instruments are consisting of a Micro Needle Holder and a pair of Micro Forceps.

The instruments were technically modified in the region of the instrument lock. The usual parallel screw lock has been replaced by a new axially turned lock to reliably prevent the suture material from sticking to the needle holder during knotting.

Advantages of the Double-Action Instruments

- double transmission to allow tactile handling
- made of special stainless steel
- needle holder with tungsten carbide insert to guarantee a long service life
- due to the round shape, the rotation is considerably facilitated, in particular during suturing, contrary to usual flat micro needle holders
- the turned design prevents threads from getting stuck

onyx

ZEPF Micro Scissors

Onyx-coated scissors offer a 3-5 times higher surface hardness. In combination with the “Supercut” grinding, this guarantees an extremely long product life and application as well as a very high precision and wear resistance. The extraordinary surface smoothness is leading to an easy slide of the scissor blades even under highest strain.

Furthermore, the anti-glare surface avoids disturbing light deflections.
The extremely smooth surface prevents adhesion of proteins.

Suture Removal Scissors
acc. to Dentist Beck

SpinLock
TECHNOLOGY BY HELMUT ZEPF

The newly developed **HELMUT ZEPF** Suture Removal Scissors are combining two functions in one instrument.

Sectioning and Retaining

The curved micro scissors won recognition for periodontal microsurgery.
They are qualified for controlled cuts in the soft tissue and their main task is the sectioning of the suture (ill. 1).

They are curved for an ideal access to all oral regions. One blade of the scissors is micro-serrated to prevent the soft tissue and the thread from slipping off (ill. 2).

The new trademarked gripping function allows the scissors to be used for the sectioning of the suture and subsequent thread removal without requiring a second instrument (ill. 2).

SpinLock TECHNOLOGY BY HELMUT ZEPF

41.010.17TC-M **Macro Needle Holder** 18 cm, TC
macro bit 11 x 2.0 mm, straight, **ZEPF**-Line, lock

What is TC ?

TC stands for “Tungsten Carbide”, a material whose superior strength wear resistance and hardness are its major properties that distinguish it from conventional materials.

Hold'n'Cut by PD Dr. Weng, combined with scissors, SpinLock, TC

The front part of the Hold'n'Cut Micro Needle Holder holds the end of the needle when entering the flap.

The front part of the needle holder, together with the micro surgical tweezers, holds the thread ends when knotting.

The back part of the Hold'n'Cut Micro Needle Holder offers scissors for the cutting of the thread without changing the instrument or needing any additional scissors.

Micro Forceps with Diamond Coating

Some forceps can also be ordered with diamond coated tips for better grip.

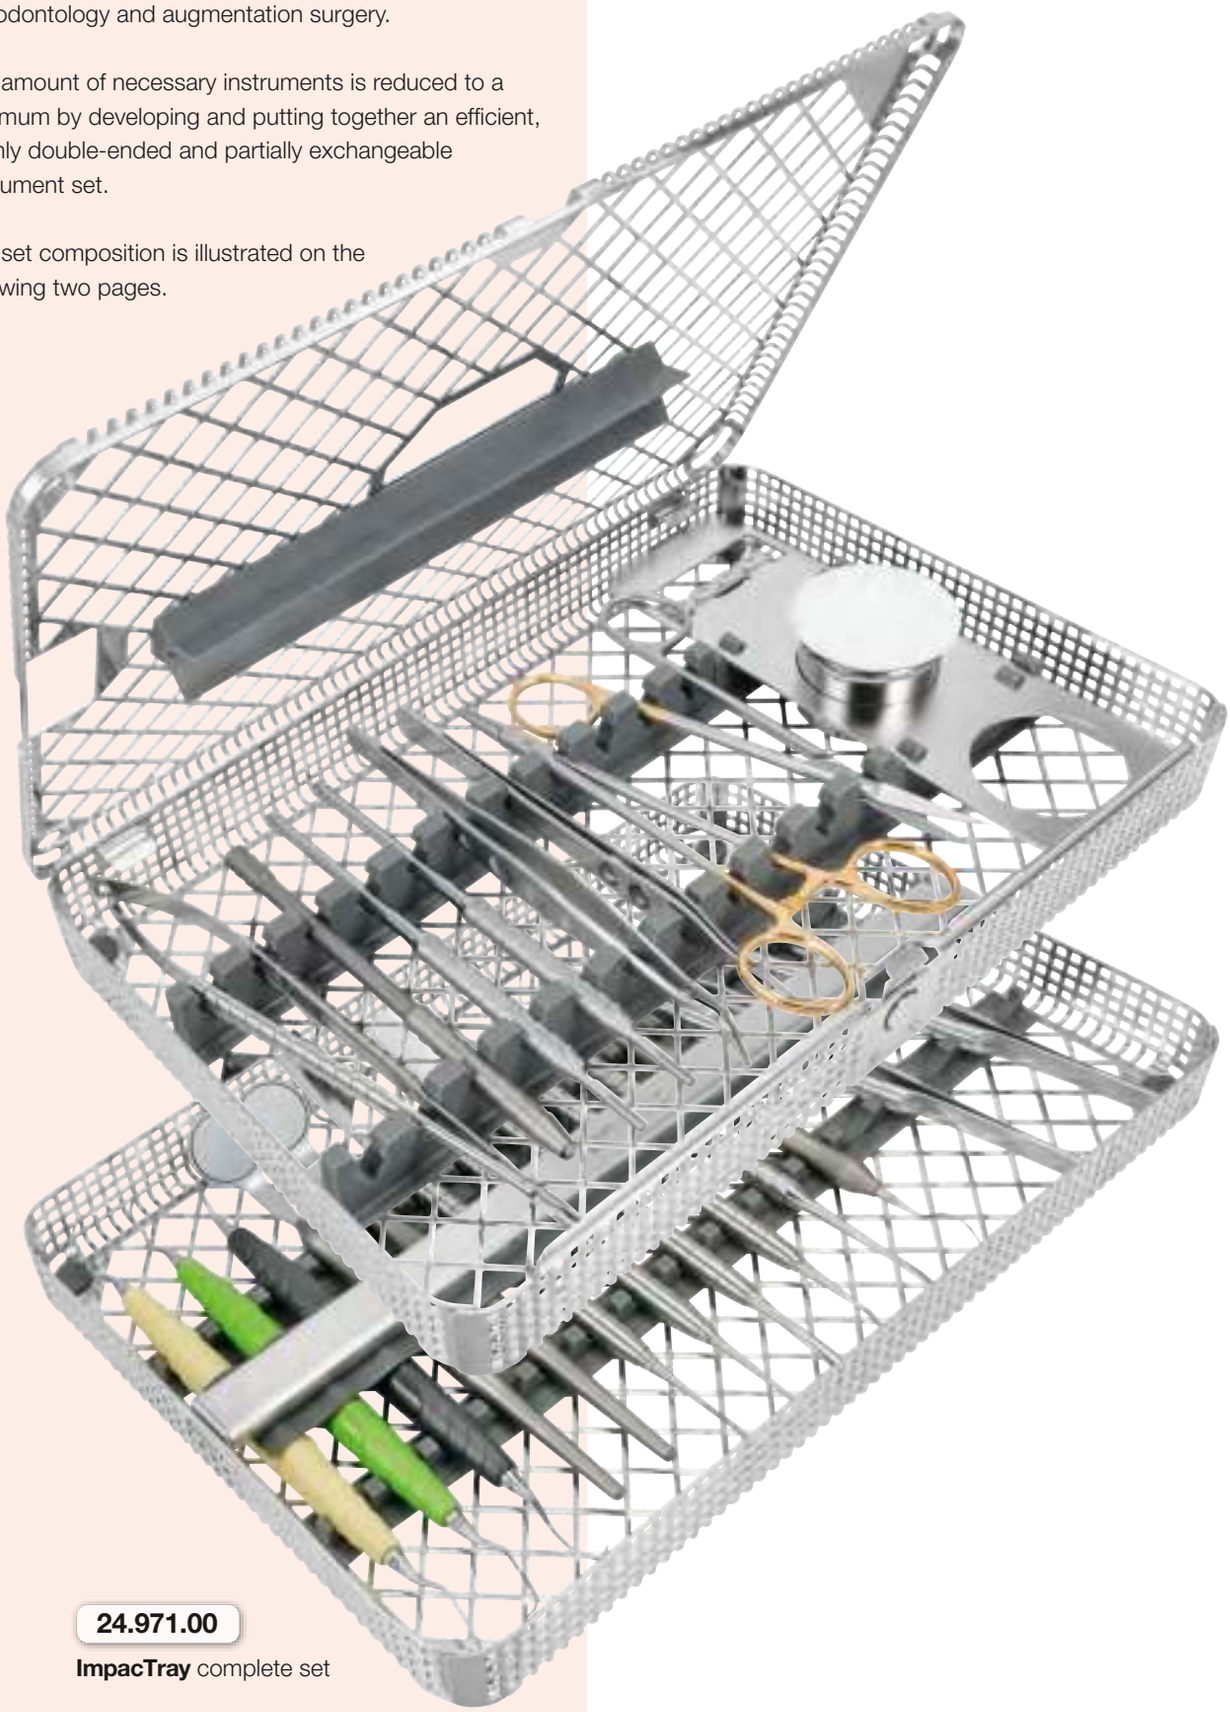
ImpacTray

acc. to PD Dr. Weng, Starnberg

The ImpacTray acc. to PD Dr. Weng makes micro as well as macro surgical operations possible in implantology, periodontology and augmentation surgery.

The amount of necessary instruments is reduced to a minimum by developing and putting together an efficient, mainly double-ended and partially exchangeable instrument set.

The set composition is illustrated on the following two pages.



24.971.00

ImpacTray complete set

ImpacTray acc. to PD Dr. Weng, Starnberg

The **ImpacTray** Set **24.971.00** incl. washtray consists of:

46.035.05 **PapillEx** Papilla Elevator acc. to **PD Dr. Weng**, Starnberg

The blunt working end of the PapillEx has a lenticular shape and allows gentle elevation of the tip of the papilla by turning the instrument while positioned adjacently to the cervical part of the tooth.
The sharp working end, which is slightly bigger, is used to remove the periosteum from the bone along the sulcular or vertical incision.
Both working ends are exchangeable and can be removed from the instrument shank if necessary.

41.015.17 **Micro Needle Holder**

Hold'n'Cut acc. to **PD Dr. Weng**, Starnberg, combined with scissors, SpinLock

The ImpacTray consists of:

ZEPF Crown-Spreading Pliers

The **HELMUT ZEPF** Crown-Spreading Pliers are perfectly designed for the spreading of crowns without pressure on the root and neigbour tooth.

The spreadding function of these pliers guarantee a safe and anatomical correct application.
The power is not anymore transfered to adjacent teeth, roots or the jaw as with conventional crown spreading pliers.

19.277.01Z

Crown-Spreading Pliers by Bauer, modified DBGM, 14.5 cm

Universal Forceps

These **HELMUT ZEPF** All-purpose Pliers should be on hand at any treatment unit. They may be used for securely grasping temporary plastic crowns, bridges, nerve instruments, stuck matrices, fixing inlays, setting interdental wedges, etc., and may be used on both upper and lower jaws.

Their tungsten carbide steel jaws provide a secure grip.

19.281.15TC

Universal All-Purpose Forceps, TC, 14.5 cm

ZEPF Tele-Grip

Easy and thus precise adjustment!

There is always a demand for a precise and above all a sensitive adjustment of a Tele-Grip, to avoid a high tension (damage caused by deformation) in critical situations.

The previous function was only partly given, especially in bigger spreading ranges it was only possible under restrictive conditions. Thus, the durability was affected due to the resulting thread damages.

The **HELMUT ZEPF** Tele-Grip has a movable threaded bearing. As a result, the adjusting screw can be aligned easily and in a most sensitive way throughout the setting range.

gently opening in every position

moveable thread bushings for a gentle and precise opening and adjusting without causing thread damages

For Temporary Bridges and Crowns

31.184.13

Crown Holding Pliers, with ring, curved, 13 cm

19.281.16

Removing Pliers for temporary bridges and crowns, TC inserts, 16 cm

19.279.00

All-Purpose Crown Lever for occlusal, buccal, palatal or labial use in the maxilla, 14 cm

31.185.02

Telescope Crown Pliers, with 2 exchangeable diamond tips 1.65 mm

Telecrown-Grip

These Telescoping-Jaw Pliers offer three variation possibilities in one.
Their adjustable and rigid tips have a first-class, anatomically correct friction coefficient.

The design of the contacting surfaces of their diamond-tipped jaws significantly extends jaw service life.
The choice of configurations allows adapting them to suit patients' anatomies.

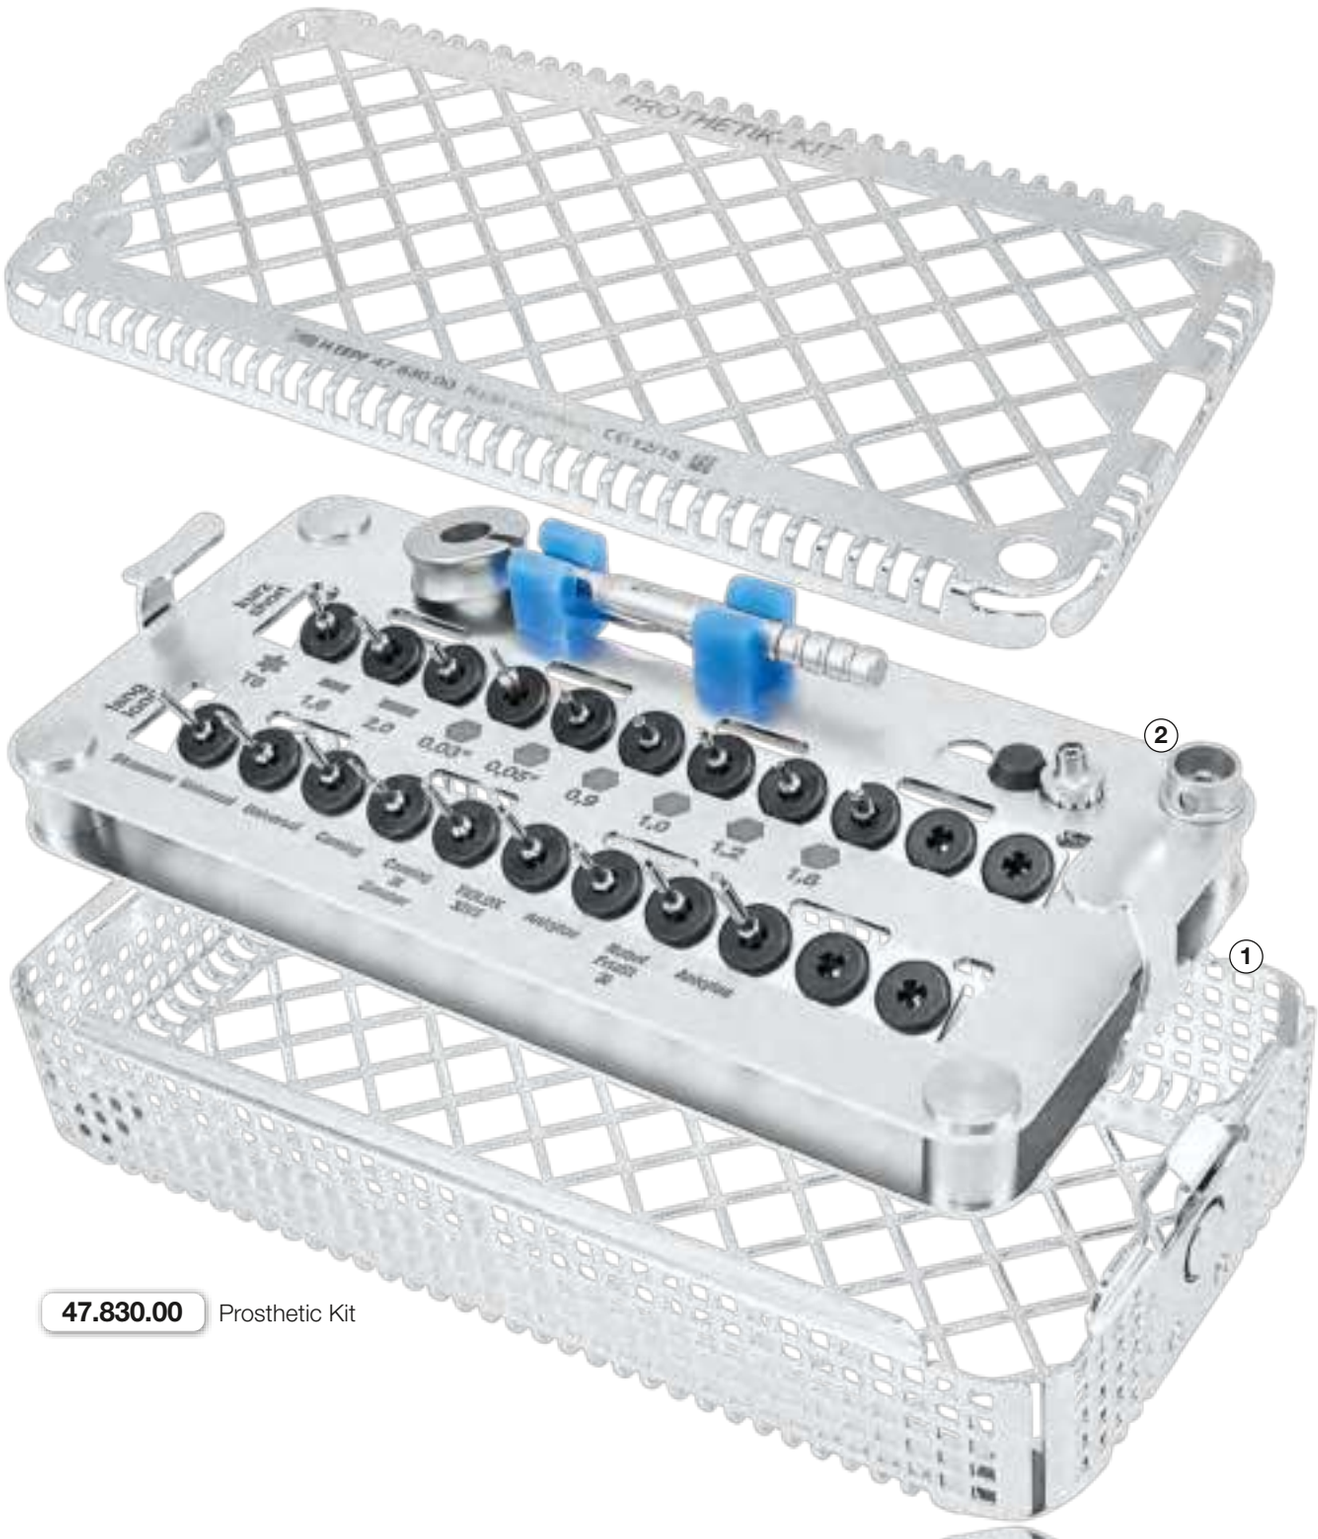
Prosthetic Kit



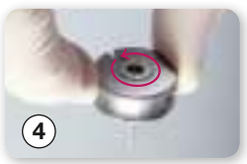
47.830.00 Prosthetic Kit

Prosthetic Kit

Every day, you have to loosen all kinds of implant abutments in the practice / in the laboratory? In order to facilitate your work, **HELMUT ZEPF** has created a prosthetic set allowing you to loosen more than 90 % of all screws available on the market.
All instruments are numbered and dispose of a RA-HEX connection. This means that these instruments can be used either in a contra-angle handpiece or in a ratchet.

Advantages Prosthetic Kit

In the RA-Hex-Adapter the inserts will be picked up.



RA-Hex Adapter inserted in ratchet. Shown with demounted handle for use as finger ratchet. Information: The RA-Hex-Adapter has a rotating finger rest available (see red arrow).

Among the recessi for two RA-Hex-Adapters a socket for a comfortable removal of the screwdriver inserts from the RA-Hex-Adapter is located.

Optionally, the finger ratchet can be used with an extension piece. The set can also be completed by a torque wrench which is adjustable from 10 - 40 Ncm and has a fixation function to deactivate the torque.

The storage tray is made of stainless steel and contains a description of each individual screwdriver in order to facilitate the identification of the tools required for the respective screw.
The tray fits into a basket and can be reprocessed reliably according to the RKI guidelines.

Scale

ZEPF care SYSTEM

The Modular Hygiene System

Flexible, efficient and approved safe. The **ZEPF** -Care Universal Silicone Profile allows an easy placement of the instruments after a surgery. For sterilization and cleaning, the instruments are inserted in the profile according to their diameter and are immediately secured.

Additionally, we have equipped the **ZEPF** -Tray and Basket-System with silicone base. Therefore the tray guarantees an anti-slip position and the stacking stability is improved at the same time.

Suitable for standardized sterilization containers, it's available in four different sizes for an ideal working potential. Placesaving, secure and very practical and with a removable lid.

Profile, low

ZEPF care SYSTEM

The **ZEPF**-Care-System increases your efficiency, as you can assemble your trays in a process-oriented way and work accordingly.
You will meet the requirements of the RKI and the accident prevention regulation.
It doesn't matter whether you are cleaning your instruments manually or automatically.

Washtrays

1/3 178 x 90 x 24

1/2 178 x 135 x 24

1/1 275 x 178 x 24

1/1 275 x 178 x 24

Advantages

- The meshes of the bottom and the lid are designed in a broad shape. Consequently dead zones are minimized.
- The diagonal profile of the mesh simplifies the identification of the parallel arranged instruments in the profile.
- The meshes on the edge of the tray are designed in a narrow shape and thus enhance the stability of the tray.
- The risk of injury is reduced.

Profile, high, universal

Profile, high, universal
(example see picture 1)

picture 1

intelligent

flexible

modular

Arranged in a practice-oriented way

As a result of the high and low configuration of the profile sections, the instruments can be placed in a space-saving way and can be removed easily.

It is possible to place two instruments above each other in one profile section. Contact of the instruments should be avoided in order to prevent contact corrosion.

Tip:

The following instrument combinations are **possible** should they contact each other:

- plastic / plastic ✔
- plastic / metal ✔
- titanium / titanium ✔
- titanium / metal ✔

In case of contact, the following instrument combination is **not possible**:

- metal / metal ✘

The modular concept of the three different lengths can be tailored according to your request.

The ‘universal profile’ is compatible with the ‘low profile’ in order to ensure a secure hold of different instrument diameters and variations.

For special cases, we recommend the assembly of our press pad in the lid.

There are no limits set regarding design of your personalized tray.

Aluminium Sterilization Container in 5 Sizes

Through the integrated filter in the lid and the base the Sterilization Containers are suitable for all steam sterilization methods:

- fractionized vacuum method
- fractionized steam method
- gravitation method
- pre-vacuum method

Different dimensions and stackability allow easy handling and optimal organization. The containers can be used for storing sterile goods and also for disposing contaminated instruments.

The newly developed latch system prevents accidental opening of the container and assures a simplified handling for the sterilization preparation.

The optimized sealing system assures a safe fixing of the filter.

Bottom and lid is perforated, optimized latch system, incl. 2 long-term textile filters
